The performance requirements and associated knowledge, skills, and aptitudes (KSAs) expected of future successful NCOs were used as a basis for developing tools that could be incorporated into an NCO performance management system geared to 21st century job demands. This report documents the design and development of predictor and criterion measures that will be used in a criterion-related validation data collection. The predictor measures include the Armed Services Vocational Aptitude Battery (ASVAB), Assessment of Individual Motivation (AIM), and Biographical Information Questionnaire (BIQ), which are operational tests already used in the Army for other purposes. A written Situational Judgment Test (SJT), the Experience and Activities Record (ExAct), Personnel File Form (PFF21), and a semi-structured interview were developed for this project. Two types of rating scale instruments were developed for gathering criterion data. The Observed Performance Rating Scales ask supervisors to rate soldiers on how well they perform in their current jobs. The Expected Future Performance Rating Scales ask supervisors to predict how their soldiers would perform in specific sets of conditions expected to be characteristic of future Army requirements.

**10 interview questions to ask a soldier: Military Recruiting in High Schools** Brian W. Lagotte, 2016-07-08 This book focuses exclusively on specific education policy instead of general military recruiting in high schools. When the George W. Bush administration passed its landmark education legislation in 2001, dubbed the No Child Left Behind Act, legislators included a small section containing strict military recruiting mandates for public high schools. The law had two main provisions. First, a data sharing provision requires high schools to distribute the personal directory information of every student to all local armed forces recruiting stations on an annual basis. Second, the equal access provision requires high schools to provide military recruiters access to school grounds equal to university recruiters or career recruiters. For accountability, if these provisions are not fulfilled, the school will lose all federal education funds. Students or parents may “opt out” of the data collection through a bureaucratic process, but no such opt-out option exists for the soldiers

visiting schools. When President Barack Obama renewed the omnibus education law in 2015, the name changed to the Every Student Succeeds Act, but the military mandates remained – the provisions were strengthened by including a passage prohibiting any local school board from instituting an “opt-in” bureaucratic structure for parents and students. This book focuses on how the two provisions have been met by parents, school staff, soldiers, and other individuals influenced by high school education policy and military recruiting. The central question is: do military recruiting methods utilized in public high schools work to promote the best interests of the students, or should policy makers rethink the freedom adult soldiers have when interacting with children within schools?

**10 interview questions to ask a soldier: *Routledge Handbook of Research Methods in Military Studies*** Joseph Soeters, Patricia M. Shields, Sebastiaan Rietjens, 2014-06-27 This volume offers an overview of the methodologies of research in the field of military studies. As an institution relying on individuals and resources provided by society, the military has been studied by scholars from a wide range of disciplines: political science, sociology, history, psychology, anthropology, economics and administrative studies. The methodological approaches in these disciplines vary from computational modelling of conflicts and surveys of military performance, to the qualitative study of military stories from the battlefield and veterans experiences. Rapidly developing technological facilities (more powerful hardware, more sophisticated software, digitalization of documents and pictures) render the methodologies in use more dynamic than ever. The Routledge Handbook of Research Methods in Military Studies offers a comprehensive and dynamic overview of these developments as they emerge in the many approaches to military studies. The chapters in this Handbook are divided over four parts: starting research, qualitative methods, quantitative methods, and finalizing a study, and every chapter starts with the description of a well-published study illustrating the methodological issues that will be dealt with in that particular chapter. Hence, this Handbook not only provides methodological know-how, but also offers a useful overview of military studies from a variety of research perspectives. This Handbook will be of much interest to students of military studies, security and war studies, civil-military relations, military sociology, political science and research methods in general.
