### **Introduction: Understanding the Power of 12 Guided Somatic Experiencing Exercises**

Somatic Experiencing (SE) is a body-oriented approach to psychotherapy that addresses the impact of trauma on the body. Unlike traditional talk therapy that focuses primarily on cognitive processing, SE acknowledges that trauma is stored in the body as unprocessed sensations, emotions, and physiological responses. These 12 guided somatic experiencing exercises aim to gently help individuals release these stored tensions, fostering a sense of safety, self-regulation, and healing. This comprehensive guide will delve into the principles behind SE and provide detailed descriptions of twelve guided exercises, offering various perspectives and insights for both practitioners and individuals seeking self-help.

## **The Core Principles of Somatic Experiencing and the Rationale Behind 12 Guided Somatic Experiencing Exercises**

SE operates on the premise that the nervous system holds the "memory" of traumatic experiences. When faced with a perceived threat, the body's natural survival response—the fight, flight, freeze, or fawn response—is activated. If this response isn't fully resolved, the body remains in a state of hyperarousal or dysregulation. 12 guided somatic experiencing exercises are designed to gently guide the nervous system back to a state of balance and equilibrium. This is achieved by:

Developing body awareness: The first step in SE is cultivating a heightened awareness of bodily sensations without judgment.

Titration of arousal: Gradually increasing exposure to sensations associated with trauma, only to the degree the nervous system can tolerate.

Resourcing: Accessing internal and external resources to support the healing process.

Pendulation: Allowing the natural rhythm of the nervous system to oscillate between activation and relaxation.

These principles are central to the effectiveness of 12 guided somatic experiencing exercises.

### **12 Guided Somatic Experiencing Exercises: A Detailed Exploration**

The following are examples of 12 guided somatic experiencing exercises. Remember, these exercises should be approached with caution, ideally under the guidance of a trained SE practitioner. Self-directed practice may not be suitable for individuals with severe trauma or complex PTSD.

1. Gentle Breathing: Focusing on the natural rhythm of breath, noticing the rise and fall of the chest and abdomen.
2. Body Scan Meditation: Systematically bringing awareness to different parts of the body, noting any sensations without judgment.
3. Grounding Exercises: Connecting with the earth through physical sensations—feeling the feet on the floor, the chair against the back.
4. Progressive Muscle Relaxation: Systematically tensing and releasing different muscle groups to release physical tension.
5. Mindful Movement: Engaging in gentle, flowing movements like yoga or tai chi to release energy blockages.
6. Felt Sense Exploration: Identifying and exploring the bodily sensations associated with specific emotions or memories.
7. Resource Activation: Bringing to mind resources like supportive people, calming places, or positive memories.
8. Trauma-Informed Breathwork: Using breath to gently mobilize and release trauma-related energy.
9. Sensory Integration Exercises: Actively engaging the five senses to ground the body in the present moment.
10. Self-Compassion Meditation: Cultivating kindness and understanding towards oneself, particularly in relation to past experiences.
11. Nature Connection: Spending time in nature to experience a sense of peace and grounding.

12. Creative Expression: Using art, music, or writing to process emotions and experiences related to the trauma.

Each of these 12 guided somatic experiencing exercises contributes to the overall goal of restoring regulation to the nervous system. They provide different pathways to access and release trapped trauma energy.

## **Understanding the Role of a Trained Practitioner in 12 Guided Somatic Experiencing Exercises**

While self-directed exploration of some of these 12 guided somatic experiencing exercises can be beneficial, it's crucial to remember that working with a trained Somatic Experiencing practitioner is often essential, especially for those with significant trauma histories. A practitioner can provide:

Personalized guidance: Tailoring the exercises to the individual's specific needs and sensitivities.

Trauma-informed support: Creating a safe and supportive therapeutic environment.

Assessment and titration: Carefully managing the intensity of the exercises to prevent re-traumatization.

Integration of experiences: Helping individuals process and integrate their experiences in a healthy way.

## **Conclusion**

12 guided somatic experiencing exercises offer a powerful pathway towards healing from trauma. By focusing on the body's wisdom and gently guiding the nervous system back to a state of regulation, SE provides a unique and effective approach to trauma recovery. While self-help resources can be valuable, seeking guidance from a qualified practitioner is often essential for maximizing the benefits and minimizing the risks associated with working with trauma. Remember that the process of healing is unique to each individual, and patience, self-compassion, and professional support are key elements in the journey.

## **FAQs**

1. Is Somatic Experiencing right for everyone? SE can be beneficial for a wide range of individuals experiencing trauma-related symptoms, but it's not appropriate for everyone. Individuals with severe mental illness or unstable conditions may need other forms of support before engaging in SE.

**12 guided somatic experiencing exercises: Healing Trauma with Guided Drawing** Cornelia Elbrecht, 2019-06-04 A body-focused, trauma-informed art therapy that will appeal to art therapists, somatic experiencing practitioners, bodyworkers, artists, and mental health professionals While art therapy traditionally focuses on therapeutic image-making and the cognitive or symbolic interpretation of these creations, Cornelia Elbrecht instructs readers how to facilitate the

body-focused approach of guided drawing. Clients draw with both hands and eyes closed as they focus on their felt sense. Physical pain, tension, and emotions are expressed without words through bilateral scribbles. Clients then, with an almost massage-like approach, find movements that soothe their pain, discharge inner tension and emotions, and repair boundary breaches. Archetypal shapes allow therapists to safely structure the experience in a nonverbal way. Sensorimotor art therapy is a unique and self-empowering application of somatic experiencing--it is both body-focused and trauma-informed in approach--and assists clients who have experienced complex traumatic events to actively respond to overwhelming experiences until they feel less helpless and overwhelmed and are then able to repair their memories of the past. Elbrecht provides readers with the context of body-focused, trauma-informed art therapy and walks them through the thinking behind and process of guided drawing--including 100 full-color images from client sessions that serve as helpful examples of the work.

**12 guided somatic experiencing exercises: Functional Somatic Symptoms in Children and Adolescents** Kasia Kozłowska, Stephen Scher, Helene Helgeland, 2020-09-30 This open access book sets out the stress-system model for functional somatic symptoms in children and adolescents. The book begins by exploring the initial encounter between the paediatrician, child, and family, moves through the assessment process, including the formulation and the treatment contract, and then describes the various forms of treatment that are designed to settle the child's dysregulated stress system. **12 guided somatic experiencing exercises: Overcoming Trauma through Yoga** David Emerson, Elizabeth Hopper, Ph.D., 2012-01-10 *Survivors of trauma—whether abuse, accidents, or war—can end up profoundly wounded, betrayed by their bodies that failed to get them to safety and that are a source of pain. In order to fully heal from trauma, a connection must be made with oneself, including one's body. The trauma-sensitive yoga described in this book moves beyond*

traditional talk therapies that focus on the mind, by bringing the body actively into the healing process. This allows trauma survivors to cultivate a more positive relationship to their body through gentle breath, mindfulness, and movement practices. *Overcoming Trauma through Yoga* is a book for survivors, clinicians, and yoga instructors who are interested in mind/body healing. It introduces trauma-sensitive yoga, a modified approach to yoga developed in collaboration between yoga teachers and clinicians at the Trauma Center at Justice Resource Institute, led by yoga teacher David Emerson, along with medical doctor Bessel van der Kolk. The book begins with an in-depth description of trauma and post-traumatic stress disorder (PTSD), including a description of how trauma is held in the body and the need for body-based treatment. It offers a brief history of yoga, describes various styles of yoga commonly found in Western practice, and identifies four key themes of trauma-sensitive yoga. Chair-based exercises are described that can be incorporated into individual or group therapy, targeting specific treatment goals, and modifications are offered for mat-based yoga classes. Each exercise includes trauma-sensitive language to introduce the practice, as well as photographs to illustrate the poses. The practices have been offered to a wide range of individuals and groups, including men and women, teens, returning veterans, and others. Rounded out by valuable quotes and case stories, the book presents mindfulness, breathing, and yoga exercises that can be used by home practitioners, yoga teachers, and therapists as a way to cultivate awareness, tolerance, and an increased acceptance of the self.

**12 guided somatic experiencing exercises:** *Somatics* Thomas Hanna, 2004-08-04 When our bodies start to feel stiff, sore, or tired, we often say that we're getting old. But is that really the problem? In this groundbreaking work, Thomas Hanna shows that much of the physical decline associated with aging is not inevitable but avoidable. Building on the work of Moshe Feldenkrais, Hanna's practical program for the mind and body proves once and for all that problems you've always thought of as the symptoms of age--stiffness, bad back, chronic pain, fatigue, and, at times, even high blood pressure--need never occur if you maintain conscious control of your nerves and muscles. He shows how the body can turn a habitual action into an involuntary, destructive pattern called sensory-motor amnesia, and demonstrates a simple but effective method for conquering these habits with sensory-motor awareness. With only a five-minute routine once a day, you can maintain the pleasures of a limber, healthy body indefinitely and escape the confines of age or injury. Practical and easy to use, *Somatics* is the essential guide to reversing the physical effects of aging--or staving them off before they even begin.

**12 guided somatic experiencing exercises:** *Trauma and Memory* Peter A. Levine, Ph.D., 2015-10-27 Designed for psychotherapists and their clients, Peter Levine's latest best-seller continues his groundbreaking exploration of the central role of the body in processing—and healing—trauma. With foreword by Bessel van der Kolk, author of *The Body Keeps the Score* In *Trauma and Memory*, bestselling author Dr. Peter Levine (creator of the Somatic Experiencing approach) tackles one of the most difficult and controversial questions of PTSD/trauma therapy: Can we trust our memories? While some argue that traumatic memories are unreliable and not useful, others insist that we absolutely must rely on memory to make sense of past experience. Building on his 45 years of successful treatment of trauma and utilizing case studies from his own practice, Dr. Levine suggests that there are elements of truth in both camps. While acknowledging that memory can be trusted, he argues that the only truly useful memories are those that might initially seem to be the least reliable: memories stored in the body and not necessarily accessible by our conscious mind. While much work has been done in the field of trauma studies to address explicit traumatic memories in the brain (such as intrusive thoughts or flashbacks), much less attention has been paid to how the body itself stores implicit memory, and how much of what we think of as memory actually comes to us through our (often unconsciously accessed) felt sense. By learning how to better understand this complex interplay of past and present, brain and body, we can adjust our relationship to past trauma and move into a more balanced, relaxed state of being. Written for trauma sufferers as well as mental health care practitioners, *Trauma and Memory* is a groundbreaking look at how memory is constructed and how influential memories are on our present state of being.

**12 guided somatic experiencing exercises: My Grandmother's Hands** Resmaa Menakem, 2021-02-25 THE NEW YORK TIMES BESTSELLER 'Insightful, thought-provoking and profound. I can't recommend highly enough' Sunny Singh 'A revolutionary work of beauty, brilliance, compassion and ultimately, hope' Robin DiAngelo The consequences of racism can be found in our bodies - in skin and sinew, in bone and blood. In this ground-breaking, inspiring work, therapist Resmaa Menakem examines the damage, the physical consequences of discrimination, from the perspective of body-centred psychology. He argues that until we learn to heal and overcome the generational anguish of white supremacy, we will all continue to bear its scars. My Grandmother's Hands is an extraordinary call to action for all of us to recognize that racism affects not only the mind, but also the body, and introduces an alternative view of what we can do to grow beyond our racial divides.

**12 guided somatic experiencing exercises: The Comprehensive Resource Model** Lisa Schwarz, Frank Corrigan, Alastair Hull, Rajiv Raju, 2016-10-04 Traditional methods employed in psychotherapy have limited effectiveness when it comes to healing the psychological effects of trauma, in particular, complex trauma. While a client may seem to make significant breakthroughs in understanding their feelings and experiences on a rational level by talking with a therapist, this will make no difference to their post-traumatic symptoms if the midbrain is unable to modulate its activity in response. The Comprehensive Resource Model argues for a novel therapeutic approach, which uniquely bridges neuroscience and spirituality through a combination of somatic therapy, traditional psychotherapy, and indigenous healing concepts to provide effective relief to survivors of trauma. The Comprehensive Resource Model was developed in response to the need for a streamlined, integrative therapeutic model; one which engages a scaffolding of neurobiological resources in many brain structures simultaneously in order for clients to be fully embodied and conscious in the present moment while processing their traumatic material. All three phases of trauma therapy: resourcing, processing, and integration are done simultaneously. Demonstrating a nested model and employing brain and body-based physiological safety as the foundation of healing, chapters describe three primary categories of targeted processing: implicit and explicit survival terror, 'Little T Truths', and 'Big T Truths', all of which contribute to thorough healing of complex trauma and an expansion into higher states of consciousness and embodiment of the essential core self. This book describes the development and benefits of this pioneering new approach to trauma therapy. As such, it will be of key interest to academics, researchers and postgraduate students in the fields of psychiatry, psychotherapy, psychology and trauma studies. It will also appeal to practising therapists, psychiatrists, psychologists, psychiatric nurses, and to others involved in the treatment or management of patients with complex trauma disorders.

**12 guided somatic experiencing exercises: Somatic Descent** Reginald A. Ray, 2020-08-25 A powerful meditation practice for connecting with your body's innate, guiding wisdom. Have you ever had a gut feeling about a certain person or situation? Or a sense of intuition about how to respond to a particular challenge in your life? There's nothing magical or mystical about those kinds of scenarios. In fact, our body contains immense wisdom not directly available to our conscious mind,

and it is continually communicating to us in the form of bodily feelings, impressions, sensations, corporeal intuitions, and felt senses. However, because most of us are so cut off from our somatic experience, we are quite unaware of this dimension of our body's expression. Although this intelligence may feel hidden most of the time, the wisdom of the body can actually be a guide for us in living our lives fully and also in responding compassionately to others. Through a meditation practice called Somatic Descent, Reggie Ray shows us how to connect with our body's intuitive intelligence. In Somatic Descent we see that the body is always showing us what sort of response, direction, or action may be called for at any given time, and can in fact be relied upon as a primary practical resource for decision-making in our everyday life. The book will include links to online audio recordings of the guided meditations to further aid the reader.

**12 guided somatic experiencing exercises:** Your Resonant Self: Guided Meditations and Exercises to Engage Your Brain's Capacity for Healing Sarah Peyton, 2017-09-12 Practices for well-being, based in neuroscience and geared toward kindness. Skills for people to learn to be with themselves in the healthiest way possible. When we experience trauma or need to find a way to protect ourselves from interpersonal hurt, we make unconscious contracts with ourselves, such as: "I will never let myself get treated that way again" or "I will never forgive myself for that." But these contracts often result in harmful behaviors like self-criticism, lack of trust, and procrastination. Until we recognize and free ourselves from these damaging contracts, we can never truly heal. *Your Resonant Self Workbook: From Self-sabotage to Self-care* takes us through the world of relational neuroscience and, using the lens of unconscious contracts, explores how our brains, nervous systems, and bodies react to the brains, nervous systems, and bodies of others. Case studies, resonant-language practice, questionnaires, meditations, and journaling provide readers with healing strategies for uncovering and rewriting these contracts. Following *Your Resonant Self*, this workbook provides the tools to turn inward with kindness, warmth, and curiosity and create opportunities for self-healing.

**12 guided somatic experiencing exercises: *Widen the Window*** Elizabeth Stanley,

2019-09-24 A pioneering researcher gives us a new understanding of stress and trauma, as well as the tools to heal and thrive. This groundbreaking book examines the cultural norms that impede resilience in America, especially our collective tendency to disconnect stress from its potentially extreme consequences and override our need to recover. It explains the science of how to direct our attention to perform under stress and recover from trauma, exploring how our survival brain and thinking brain react to traumatic situations differently. By directing our attention in particular ways, we can widen the window within which our thinking brain and survival brain work together cooperatively. When we use awareness to regulate our biology this way, we can access our best, uniquely human qualities: our compassion, courage, curiosity, creativity, and connection with others. By building our resilience, we can train ourselves to make wise decisions and access choice - even during times of incredible stress, uncertainty and change. With stories from men and women Dr Stanley has trained in settings as varied as military bases, healthcare facilities, as well as her own striking experiences with stress and trauma, she gives readers hands-on strategies they can use themselves, whether they want to perform under pressure or heal from traumatic experience, while at the same time pointing our understanding in a new direction. Foreword by Bessel Van Der Kolk, bestselling author of *The Body Keeps the Score*. 'Widen the Window is a comprehensive overview of stress and trauma, responses to it, and tools for healing and thriving. It's not only for those in high-intensity work, but for everyone.' - Mindful Magazine

Healing with Nature pioneers a path not just to recovery but to lifelong healing and resilience.

**12 guided somatic experiencing exercises: The Body Remembers: The Psychophysiology of Trauma and Trauma Treatment** Babette Rothschild, 2000-10-17 For both clinicians and their clients there is tremendous value in understanding the psychophysiology of trauma and knowing what to do about its manifestations. This book illuminates that physiology, shining a bright light on the impact of trauma on the body and the phenomenon of somatic memory. It is now thought that people who have been traumatized hold an implicit memory of traumatic events in their brains and bodies. That memory is often expressed in the symptomatology of posttraumatic stress disorder—nightmares, flashbacks, startle responses, and dissociative behaviors. In essence, the body of the traumatized individual refuses to be ignored. While reducing the chasm between scientific theory and clinical practice and bridging the gap between talk therapy and body therapy, Rothschild presents principles and non-touch techniques for giving the body its due. With an eye to its relevance for clinicians, she consolidates current knowledge about the psychobiology of the stress response both in normally challenging situations and during extreme and prolonged trauma. This gives clinicians from all disciplines a foundation for speculating about the origins of their clients' symptoms and incorporating regard for the body into their practice. The somatic techniques are chosen with an eye to making trauma therapy safer while increasing mind-body integration. Packed with engaging case studies, *The Body Remembers* integrates body and mind in the treatment of posttraumatic stress disorder. It will appeal to clinicians, researchers, students, and general readers.

**12 guided somatic experiencing exercises: The Body Keeps the Score** Bessel van der Kolk, M.D., 2014-09-25 #1 New York Times bestseller “Essential reading for anyone interested in understanding and treating traumatic stress and the scope of its impact on society.” —Alexander McFarlane, Director of the Centre for Traumatic Stress Studies A pioneering researcher transforms our understanding of trauma and offers a bold new paradigm for healing in this New York Times bestseller *Trauma is a fact of life*. Veterans and their families deal with the painful aftermath of combat; one in five Americans has been molested; one in four grew up with alcoholics; one in three couples have engaged in physical violence. Dr. Bessel van der Kolk, one of the world's foremost experts on trauma, has spent over three decades working with survivors. In *The Body Keeps the Score*, he uses recent scientific advances to show how trauma literally reshapes both body and brain, compromising sufferers' capacities for pleasure, engagement, self-control, and trust. He explores innovative treatments—from neurofeedback and meditation to sports, drama, and yoga—that offer new paths to recovery by activating the brain's natural neuroplasticity. Based on Dr. van der Kolk's own research and that of other leading specialists, *The Body Keeps the Score* exposes the tremendous power of our relationships both to hurt and to heal—and offers new hope for reclaiming lives.

**12 guided somatic experiencing exercises: Trauma and the Body: A Sensorimotor Approach to Psychotherapy** (Norton Series on Interpersonal Neurobiology) Kekuni Minton, Pat Ogden, Clare Pain, 2006-10-17 The body, for a host of reasons, has been left out of the talking cure. Psychotherapists who have been trained in models of psychodynamic, psychoanalytic, or cognitive therapeutic approaches are skilled at listening to the language and affect of the client. They track the clients' associations, fantasies, and signs of psychic conflict, distress, and defenses. Yet while the majority of therapists are trained to notice the appearance and even the movements of the client's body, thoughtful engagement with the client's embodied experience has remained peripheral to

traditional therapeutic interventions. *Trauma and the Body* is a detailed review of research in neuroscience, trauma, dissociation, and attachment theory that points to the need for an integrative mind-body approach to trauma. The premise of this book is that, by adding body-oriented interventions to their repertoire, traditionally trained therapists can increase the depth and efficacy of their clinical work. Sensorimotor psychotherapy is an approach that builds on traditional psychotherapeutic understanding but includes the body as central in the therapeutic field of awareness, using observational skills, theories, and interventions not usually practiced in psychodynamic psychotherapy. By synthesizing bottom-up and top down interventions, the authors combine the best of both worlds to help chronically traumatized clients find resolution and meaning in their lives and develop a new, somatically integrated sense of self. Topics addressed include: Cognitive, emotional, and sensorimotor dimensions of information processing • modulating arousal • dyadic regulation and the body • the orienting response • defensive subsystems • adaptation and action systems • treatment principles • skills for working with the body in present time • developing somatic resources for stabilization • processing

**12 guided somatic experiencing exercises:** *The 12 Stages of Healing* Donald M. Epstein, Nathaniel Altman, 2023-02-01 *The 12 Stages of Healing* is an extraordinary new approach to healing the mind and body. Dr. Epstein, founder and creator of Network Spinal, offers fascinating insights into the complex relationship between mind, emotions, and body, and shows us how to promote greater health in our bodies and harmony in our relationships. Have you, or someone you love, experienced . . . • A recurring sickness, healing crisis, or life-threatening illness? • A feeling of emptiness and longing for no apparent reason? • A major trauma, emotional hardship, or life-changing event? • A feeling of being stuck in a pattern of self-destructive behavior? After observing thousands of people in both private practice and public seminars, Dr. Epstein discovered 12 basic rhythms, or stages of consciousness, shared by all humanity. Each stage of healing has a distinct “rite of passage” that helps us to reunite with aspects of ourselves that are traumatized, alienated, forgotten, abused, shamed, or unforgiven. Each stage also has a characteristic pattern of breath, movement, and touch that can help us to reconnect with the natural, internal rhythms of our body, and experience a greater sense of joy and well-being. “Donald Epstein is an extraordinary healer. In my 25 years of traveling the globe, I’ve never seen anyone who is able to produce the impact he does in such a short period of time. He opens our hearts to new possibilities for individuals and humanity.” — Tony Robbins, Peak Performance Coach and best-selling author of *Unlimited Power*

**12 guided somatic experiencing exercises:** *The Art of Healing Trauma Coloring Book* Heidi Hanson, 2017-11-27 Slow down, tune into yourself and relax while you color 20 beautiful coloring pages centered around the theme of recovering from challenging past experiences. Each of the first 13 illustrations in this adult coloring book is accompanied by a mindfulness activity or somatic therapy exercise that teaches you how to be more present with your body and self-regulate your own nervous system. These body awareness activities are not just useful for healing from trauma; they can also help to reduce stress and anxiety. The last seven illustrations are accompanied by messages that address various deeper aspects of the healing process. These seven pages of poetry and written word were created to be short meditations to sink into while coloring. The act of coloring itself is also quite therapeutic: When you engage in the creativity of choosing different colors, the rhythmic repeated actions of filling shapes with color, and deep mental concentration of coloring, your body calms down and you become more centered, making coloring a great way to practice self-care. Illustrated and written by artist Heidi Hanson, creator of New-Synapse.com Tools for Self Healing and The Art of Healing Trauma Blog.

**12 guided somatic experiencing exercises:** *Anxiety Rx* Russell Kennedy, 2024-09-17 From physician and neuroscientist Russell Kennedy, MD comes an award-winning book that offers a revolutionary, life-changing approach to healing anxiety. Break the cycle of anxiety with the newly

upgraded and expanded second edition. After years of trying different therapies for his debilitating anxiety without success, Dr. Russell Kennedy had an epiphany: anxiety does not start in the brain. Anxiety starts in the body, where trauma is stored and physical and emotional perception begin. Alarm bells originating in the body are what trigger those anxious thoughts that we call anxiety, and Russ realized that true healing starts only when we learn not to conflate the two. He understood that existing therapies focused only on the mind would never get to the root of the problem—at best, they could help manage symptoms, but they'd never truly heal anxiety. Wanting to make a difference for the millions who suffer from anxiety disorder, Russ created Anxiety Rx, a book that blends his personal story with medical science, neuroscience, and developmental psychology. Readers learn how to sever the connection between the somatic alarm and the flood of anxious thoughts—in the process they begin to heal old trauma and gain a sense of control previously unknown. Russ offers techniques not only for our thinking minds, but for our feeling bodies, changing not just our mindset, but our “body-set.” Unraveling the intricate relationship between anxiety, the body, and the mind, Anxiety Rx offers a profound path toward healing and growth.

Boundaries and Interpersonal Relationships 7. Identity and Differentiation 8. Emotions and Emotional Regulation 9. Coping Techniques and Maintaining Improvement The sections of this manual offer an organized framework for addressing the different problem areas of those with BPD. Its 35 sessions include psychoeducation, resources and exercises for the development of reflective thinking, emotional regulation and self-care. From the beginning, the patient is actively involved in the process, which starts with self-observation in order to promote reflective capacity and curiosity. By using this approach, patients do not simply become passive recipients of information, but gradually explore their different problem areas and learn to see how they interfere with their quality of life and ability to function adaptively in the world. A toolbox for clinicians.
