3d printing in education: Active Learning in College Science Joel J. Mintzes, Emily M. Walter, 2020-02-23 This book explores evidence-based practice in college science teaching. It is grounded in disciplinary education research by practicing scientists who have chosen to take Wieman's (2014) challenge seriously, and to investigate claims about the efficacy of alternative strategies in college science teaching. In editing this book, we have chosen to showcase outstanding cases of exemplary practice supported by solid evidence, and to include practitioners who offer models of teaching and learning that meet the high standards of the scientific disciplines. Our intention is to let these distinguished scientists speak for themselves and to offer authentic guidance to those who seek models of excellence. Our primary audience consists of the thousands of dedicated faculty and graduate students who teach undergraduate science at community and technical colleges, 4-year liberal arts institutions, comprehensive regional campuses, and flagship research universities. In keeping with Wieman's challenge, our primary focus has been on identifying classroom practices that encourage and support meaningful learning and conceptual understanding in the natural sciences. The content is structured as follows: after an Introduction based on

Constructivist Learning Theory (Section I), the practices we explore are Eliciting Ideas and Encouraging Reflection (Section II); Using Clickers to Engage Students (Section III); Supporting Peer Interaction through Small Group Activities (Section IV); Restructuring Curriculum and Instruction (Section V); Rethinking the Physical Environment (Section VI); Enhancing Understanding with Technology (Section VII), and Assessing Understanding (Section VIII). The book's final section (IX) is devoted to Professional Issues facing college and university faculty who choose to adopt active learning in their courses. The common feature underlying all of the strategies described in this book is their emphasis on actively engaging students who seek to make sense of natural objects and events. Many of the strategies we highlight emerge from a constructivist view of learning that has gained widespread acceptance in recent years. In this view, learners make sense of the world by forging connections between new ideas and those that are part of their existing knowledge base. For most students, that knowledge base is riddled with a host of naïve notions, misconceptions and alternative conceptions they have acquired throughout their lives. To a considerable extent, the job of the teacher is to coax out these ideas; to help students understand how their ideas differ from the scientifically accepted view; to assist as students restructure and reconcile their newly acquired knowledge; and to provide opportunities for students to evaluate what they have learned and apply it in novel circumstances. Clearly, this prescription demands far more than most college and university scientists have been prepared for.

3d printing in education: Basic Human Ferdson James, 2010-09-11 God realization and human consciousness There might be one kind of perception in mind when you come across Basic Human. My main focus and reasoning is base on the psychological and inspirational approach to God realization and human consciousness. The world is operating none theistically and most of the people never knew any more than what human beings can do that makes them virtually believe much in humanism. So to make people aware that there is more to the physical structural function (human body) in human existence, Basic human in an inspirational perception instituting theism out of the secular awareness of the world. As we all know that we are mostly familiar with people in our activities and easily wary our mind into some mysteries concerning humanity. One thing that should be understood is the mysteries could not have been mistakenly happened or continues happening. Concluding the origin of human existence to evolution would be vanity upon vanity. Then verbatim proof of God, the creator of human beings could be vague a belief but more receptive to let everybody finally retain their conscience as the only hope to the mysteries. The book is written most especially to point out the essential facts against the misconceiving notions embedded in the most people's mind. The concept should be taken as a basic fact everybody need to be aware about the background of human existence for the realization of God.
