**220 science park cambridge: Venture Capital in the Changing World of Entrepreneurship** John E. Butler, Andy Lockett, Deniz Ucbasaran, 2006-03-01 It was not that long ago that it might have been possible to cover the topic of venture capital in one paper. Now, it is not possible to provide comprehensive coverage in even one book. The industry has flourished, as variations of the initial venture capital funds have been developed and now operates in most developing and developed economies. This is clearly reflected in this volume, which has a strong focus on Europe and Asia. Each of the papers is a stand alone effort. However, a full reading of the volume provides a panoramic picture of the global extent of venture capital, some of its challenges, and the likely direction of future efforts. Venture capital and the venture capitalist have been shown to have a positive impact on performance in many cases. This is clearly the reason why some many emerging economies want to increase the level of venture capital investment in their country.

**220 science park cambridge: Get off the Grass** Shaun Hendy, Paul Callaghan, 2013-11-01 In a brilliant intellectual adventure that ranges from David Ricardo and Adam Smith to economic geography and the science of complex networks, Shaun Hendy and Paul Callaghan explore how New Zealanders can learn to live off knowledge rather than nature. The key to increasing New Zealand's prosperity, they argue, is innovation in high-tech niches. To catch up with the countries that lure young Kiwis away, New Zealand needs to start innovating like a city of four million people; it needs to start taking science seriously; it needs to start seeing its people as people of learning, not just of

the land. *Get off the Grass* provides a readable introduction to a wide variety of ideas including economic geography, network theory, and complexity theory; offers unique insights into the New Zealand economy and its long-term prospects; adds to current debates worldwide about innovation, science, economic growth, and networks.

**220 science park cambridge: Research and Technology Buildings** Hardo Braun, Dieter Grömling, 2005-04-08 The significance of research and technology in today's economies is undisputed and continues to grow. Designing buildings to accommodate a range of functions, from laboratory experiments through prototype development to presentation and marketing is an architectural field of great potential. Commissioned by universities, public institutes and private companies, the challenge is to reconcile security and accessibility, laboratories equipped with sensitive, state-of-the-art instruments and facilities for theoretical research. Zoning, circulation and functional requirements, as well as the historical development and contemporary context of research building, are covered in the opening systematic chapters of this Design Manual. Following this some 70 built projects, largely from Europe, the USA and Asia, are analysed according to a variety of aspects such as urban integration and communications infrastructure. The authors, both from the internationally renowned Max Planck Society, and contributors draw on their own substantial practical experience of planning and building research facilities.

**220 science park cambridge: The Fields of Britannia** Stephen Rippon, Chris Smart (Archaeologist), Ben Pears, 2015 It has long been recognized that the landscape of Britain is one of the 'richest historical records we possess', but just how old is it? *The Fields of Britannia* is the first book to explore how far the countryside of Roman Britain has survived in use through to the present day, shaping the character of our modern countryside. Commencing with a discussion of the differing views of what happened to the landscape at the end of Roman Britain, the volume then brings together the results from hundreds of archaeological excavations and palaeoenvironmental investigations in order to map patterns of land-use across Roman and early medieval Britain. In compiling such extensive data, the volume is able to reconstruct regional variations in Romano-British and early medieval land-use using pollen, animal bones, and charred cereal grains to demonstrate that agricultural regimes varied considerably and were heavily influenced by underlying geology. We are shown that, in the fifth and sixth centuries, there was a shift away from intensive farming but very few areas of the landscape were abandoned completely. What is revealed is a surprising degree of continuity: the Roman Empire may have collapsed, but British farmers carried on regardless, and the result is that now, across large parts of Britain, many of these Roman field systems are still in use.

**220 science park cambridge: The Multinational Subsidiary** N. Hood, 2003-11-03 This book highlights the evolution of the thinking on the multinational subsidiary over a quarter of a century, from the early concerns about the 'branch plant syndrome' to very current topics relating to the Multinational Enterprise as a differentiated corporate network and its role in innovation and entrepreneurship. It summarises and evaluates the state of the art in research on the multinational subsidiary, with particular reference to managerial and economic development dimensions. The volume presents the articles of Neil Hood (written in conjunction with other leading scholars, particularly Julian Birkinshaw and Stephen Young), along with new contributions. The book will be of major interest to students, researchers and policy makers.

**220 science park cambridge: Contemporary Poetry and Contemporary Science** Robert Crawford, 2006-09-07 A unique collaboration between leading poets and scientists, *Contemporary Poetry and Contemporary Science* demonstrates through its form, and through practice as well as

reflection, that poetry and science can meet with productive results. Crossing between disciplines, and between prose and verse, the book shows how modes of scientific knowledge and of poetic making continue to be intertwined. Often drawing on Scottish intellectual traditions, rather than on the notorious 'two cultures' argument, *Contemporary Poetry and Contemporary Science* argues through examples for a more open and mutually sympathetic engagement of poetry and science in contemporary culture. Provocative, nimble, and surprising, this book is in several senses a crossover volume. In its gathering of essays as well as poems, it is the first book of its kind. Readers can see how a poet and a solar physicist may share working assumptions; how poetic insight may inform psychiatric practice; how a poet's encounter with an MRI scanner leads to a fresh neurological experiment. As well as new essays by internationally distinguished poets, scientists, and literary critics including Simon Armitage, Gillian Beer, Jocelyn Bell Burnell, Miroslav Holub, Kay Redfield Jamison, and Edwin Morgan, the book includes a series of specially commissioned poems by John Burnside, Michael Donaghy, Sarah Maguire, Paul Muldoon, Don Paterson, and others. Each poem is introduced by the scientist whose work prompted the poem. Though *Contemporary Poetry and Contemporary Science* exposes and investigates strains between the way poets and scientists see and reinvent the world, the book is most arresting and enjoyable when it shows just how often poets and scientists agree.

**220 science park cambridge:** **The Scientific Life** Steven Shapin, 2009-08-01 Who are scientists? What kind of people are they? What capacities and virtues are thought to stand behind their considerable authority? They are experts—indeed, highly respected experts—authorized to describe and interpret the natural world and widely trusted to help transform knowledge into power and profit. But are they morally different from other people? *The Scientific Life* is historian Steven Shapin's story about who scientists are, who we think they are, and why our sensibilities about such things matter. Conventional wisdom has long held that scientists are neither better nor worse than anyone else, that personal virtue does not necessarily accompany technical expertise, and that scientific practice is profoundly impersonal. Shapin, however, here shows how the uncertainties attending scientific research make the virtues of individual researchers intrinsic to scientific work. From the early twentieth-century origins of corporate research laboratories to the high-flying scientific entrepreneurship of the present, Shapin argues that the radical uncertainties of much contemporary science have made personal virtues more central to its practice than ever before, and he also reveals how radically novel aspects of late modern science have unexpectedly deep historical roots. His elegantly conceived history of the scientific career and character ultimately encourages us to reconsider the very nature of the technical and moral worlds in which we now live. Building on the insights of Shapin's last three influential books, featuring an utterly fascinating cast of characters, and brimming with bold and original claims, *The Scientific Life* is essential reading for anyone wanting to reflect on late modern American culture and how it has been shaped.

**220 science park cambridge:** Variations in Organization Science Joel A. C. Baum, Bill McKelvey, 1999-05-14 In my judgment this book in honor of Donald T. Campbell will be very influential and highly cited. . . . It will become a must read for Ph.D. students and scholars in strategy and organization theory. —Arie Lewin, Duke University The topics in this volume are cutting edge, and the contributors are first-rate. The book is well anchored—Donald T. Campbell has had a profound influence on the field. Moreover, the book is well-conceptualized—socio-cultural evolution, co-evolution, methods modeling, and epistemology are key issues in organization science right now. —Michael Tushman, Harvard University If he were an assistant professor today, what would social science giant Donald T. Campbell be pursuing in the field of organization science? Joel

A. C. Baum and Bill McKelvey explore this question in *Variations in Organization Science*. This volume reveals and celebrates Campbell's many contributions to organization science by presenting new variations that stem directly from his work. Rather than analyze Campbell's theories, the authors present ideas that Campbell might have pursued if he were currently a doctoral student. This volume is unique in its focus on coevolution and multilevel coevolutionary analysis, as well as in its range of subject matter from empirical studies to leading-edge epistemological discourses. Each of the book's four main sections focuses on a major aspect of Campbell's legacy: blind variation, selection, and retention; multilevel coevolution; process level analysis and modeling; and epistemology and methodology. In addition, the volume includes a Foreword by Barbara Frankel Campbell and an unusual Appendix: Donald Campbell's complete curriculum vitae. *Variations in Organization Science* should be on the top of the reading list for any organization scientist interested in organizational evolution, change, and competitiveness. This volume will also appeal to any scholar interested in the human and social capital base of firms and how organizational knowledge and learning work to provide the basis of competitive advantage.

The major goal of the AMAST conferences is to promote research that may lead to setting software technology on a firm mathematical basis. This goal is achieved through a large international cooperation with contributions from both academia and industry. Developing a software technology on a mathematical basis produces software that is: (a) correct, and the correctness can be proved mathematically, (b) safe, so that it can be used in the implementation of critical systems, (c) portable, i. e. , independent of computing platforms and language generations, (d) evolutionary, i. e. , it is self-adaptable and evolves with the problem domain. All previous AMAST conferences, which were held in Iowa City (1989, 1991), Twente (1993), Montreal (1995), Munich (1996), Sydney (1997), Manaus (1999), and Iowa City (2000), made contributions to the AMAST goals by reporting and disseminating academic and industrial achievements within the AMAST area of interest. During these meetings, AMAST attracted an international following among researchers and practitioners interested in software technology, programming methodology, and their algebraic, and logical foundations.

**220 science park cambridge: Emerging Clusters** Dirk Fornahl, Sebastian Henn, Max-Peter Menzel, 2010-01-01 This book rigorously explores the critical, initial stage of cluster emergence in

which the seeds for further growth are sown. Whether economic growth actually occurs, however, ultimately depends on various regional conditions and the processes in place. The contributors offer a broad spectrum of conceptual perspectives and empirical case studies on the regional factors and policies required for economic growth. They discuss the link between new clusters and established regional paths, the generation of institutions and endogenous dynamics, and the patterns of emergence and growth of successful clusters. A number of important questions are addressed, including: How do opportunities and crises influence cluster emergence? Is cluster emergence purely random or can it be planned? How can emerging clusters be identified and their growth patterns measured? How can regional policies support cluster emergence? Filling a gap in the literature on the actual genesis of clusters, this path-breaking book will prove a fascinating read for academics focusing on economics, geography, entrepreneurship, technological change and innovation, and regional studies.
