302 quiz case study soil: Rainfall-Induced Soil Slope Failure Lulu Zhang, Jinhui Li, Xu Li, Jie Zhang, Hong Zhu, 2018-09-03 Rainfall-induced landslides are common around the world. With global climate change, their frequency is increasing and the consequences are becoming greater. Previous studies assess them mostly from the perspective of a single discipline—correlating landslides with rainstorms, geomorphology and hydrology in order to establish a threshold prediction value for rainfall-induced landslides; analyzing the slope's stability using a geomechanical approach; or assessing the risk from field records. Rainfall Induced Soil Slope Failure: Stability Analysis and Probabilistic Assessment integrates probabilistic approaches with the geotechnical modeling of slope failures under rainfall conditions with unsaturated soil. It covers theoretical models of rainfall infiltration and stability analysis, reliability analysis based on coupled hydro-mechanical modelling, stability of slopes with cracks, gravels and spatial heterogenous soils, and probabilistic model calibration based on measurement. It focuses on the uncertainties involved with rainfall-induced landslides and presents state-of-the art techniques and methods which characterize the uncertainties and quantify the probabilities and risk of rainfall-induced landslide hazards. Additionally, the authors cover: The failure mechanisms of rainfall-induced slope failure Commonly

302 quiz case study soil: Organic Contaminants in the Environment K.C. Jones, 2013-03-09 ENVIRONMENTAL MANAGEMENT SERIES The current expansion of both public and scientific interest in environmental issues has not been accompanied by a commensurate production of adequate books, and those which are available are widely variable in approach and depth. The Environmental Management Series has been established with a view to co-ordinating a series of volumes dealing with each topic within the field in some depth. It is hoped that this Series will provide a uniform and quality coverage and that, over a period of years, it will build up to form a library of reference books covering most of the major topics within this diverse field. It is envisaged that the books will be of single, or dual, authorship, or edited volumes as appropriate for respective topics. The level of presentation will be advanced, the books being aimed primarily at a research/consultancy readership. The coverage will include all aspects of environmental science and engineering pertinent to management and monitoring of the natural and man-modified environment, as well as topics dealing with the political, economic, legal and social considerations pertaining to environmental management. J. CAIRNS and R.M. HARRISON v Preface The behaviour and effects of chemicals in our environment is a fascinating subject for scientific investigation. Furthermore, an understanding of these processes is of fundamental importance in our modern world, and should enable us to understand and limit the adverse effects of pollutants.

302 quiz case study soil: Henry Lee's Crime Scene Handbook Henry C. Lee, Timothy Palmbach, Marilyn T. Miller, 2001-07-11 Even a seemingly trivial mistake in how physical evidence is collected and handled can jeopardise an entire criminal case. The authors present this guide to

302 quiz case study soil: Combined Abiotic Interactions in Woody Plants Hülya Torun, Srdjan Stojnic, Claudia Coccozza, Peter Petrík, 2024-07-29 Plants growing in nature are subjected to multiple stress factors caused by abiotic and biotic conditions. The sessile characteristics of plants make them vulnerable to those conditions. In addition, crop losses can be increased by simultaneous exposure to factors such as drought, heat, light, salinity, flooding, wounding, nutrient imbalances, heavy metals, high atmospheric CO₂, UV-B, etc. Furthermore, simultaneous exposure to these stress agents adversely affects plant growth, development, yield, and food production. Besides, climate change and global warming have increased these environmental stressors. Plants, therefore, change cellular metabolite levels for controlling processes (e.g., programmed cell death, abiotic stress responses, pathogen defense, and systemic signaling) to counter harmful effects. Most woody plants are well adapted to adverse conditions; however, many aspects of adaptation mechanisms are still unsolved. Understanding woody plants' physiological and biochemical responses to combined stress factors is vital.
