Introduction: Mastering the A, B, C, D, E Nursing Assessment

The A, B, C, D, E nursing assessment is a fundamental and life-saving methodology employed by nurses in various settings, particularly in emergency and critical care. This systematic approach prioritizes immediate life threats, ensuring timely interventions and optimizing patient outcomes. This comprehensive guide delves into the intricacies of the A, B, C, D, E nursing assessment, providing a detailed overview of each component, alongside practical applications and considerations for different patient populations. Understanding and mastering the A, B, C, D, E nursing assessment is crucial for all nurses, regardless of their specialty, as it forms the bedrock of effective patient care. This article will thoroughly explore the A, B, C, D, E nursing assessment, providing a detailed guide for both seasoned professionals and those new to the practice.

Airway (A): Establishing a Patent Airway in the A, B, C, D, E Nursing Assessment

The "A" in the A, B, C, D, E nursing assessment stands for airway. Securing a patent airway is the absolute priority, as compromised breathing leads to hypoxia and rapid deterioration. This assessment involves:

Visual inspection: Look for obvious obstructions like foreign bodies, swelling, or bleeding.
Auscultation: Listen to breath sounds for presence, quality, and symmetry.
Palpation: Feel for the presence of tracheal deviation or subcutaneous emphysema.

Interventions: These range from simple maneuvers like head tilt-chin lift or jaw thrust (avoiding neck manipulation in suspected spinal injury) to more advanced techniques like endotracheal intubation or cricothyroidotomy in severe cases. The A, B, C, D, E nursing assessment emphasizes the immediate need for airway management when compromised.

Breathing (B): Assessing Respiratory Function in the A, B, C, D, E Nursing Assessment

The "B" in the A, B, C, D, E nursing assessment signifies breathing. Once the airway is secured, the focus shifts to evaluating respiratory function. This component involves:

Respiratory rate and rhythm: Observing rate, depth, and pattern of breathing for irregularities like tachypnea, bradypnea, or apnea.

Breath sounds: Auscultating for normal or adventitious breath sounds (wheezes, crackles, rales).

Oxygen saturation: Measuring SpO₂ using pulse oximetry to assess oxygenation levels.

Work of breathing: Observing the patient's effort in breathing – retractions, use of accessory muscles, nasal flaring.

Interventions: Interventions may include supplemental oxygen, assisted ventilation (e.g., bag-valve mask ventilation), or treatment of underlying respiratory issues. The systematic nature of the A, B, C, D, E nursing assessment guides prompt intervention.

Circulation (C): Evaluating Cardiovascular Status in the A, B, C, D, E Nursing Assessment

The "C" in the A, B, C, D, E nursing assessment represents circulation. Adequate circulation is essential for delivering oxygen and nutrients to tissues. The assessment includes:

Pulse: Assessing heart rate, rhythm, and strength.

Blood pressure: Measuring systolic and diastolic blood pressure to determine perfusion status.

Skin color, temperature, and moisture: Assessing for signs of shock (pale, cool, clammy skin).

Capillary refill: Checking capillary refill time to evaluate peripheral perfusion.

Interventions: Interventions may involve fluid resuscitation, blood transfusions, vasopressors, or treatment of underlying cardiac issues. The A, B, C, D, E nursing assessment emphasizes the rapid identification and treatment of circulatory compromise.

Disability (D): Neurological Assessment in the A, B, C, D, E Nursing Assessment

The "D" in the A, B, C, D, E nursing assessment stands for disability, referring to neurological status. This assessment involves:

Level of consciousness: Assessing alertness and responsiveness using the Glasgow Coma Scale

(GCS).

Pupil assessment: Evaluating pupil size, shape, and reactivity to light.

Motor function: Assessing muscle strength and movement.

Sensory function: Assessing sensation in extremities.

Interventions: Interventions depend on the findings and may include management of head injuries, seizure control, or treatment of neurological deficits. The A, B, C, D, E nursing assessment prioritizes rapid identification of neurological impairment.

Exposure (E): Comprehensive Physical Examination in the A, B, C, D, E Nursing Assessment

The "E" in the A, B, C, D, E nursing assessment signifies exposure, meaning a complete physical examination. This step involves:

Removing clothing: Carefully removing clothing to inspect the entire body for injuries, rashes, or other significant findings.

Maintaining warmth: Preventing hypothermia by using blankets or warming devices as appropriate.

Documentation: Meticulous documentation of all findings, including injuries, wounds, and other observations.

Interventions: Appropriate interventions based on the findings during the complete physical examination. The A, B, C, D, E nursing assessment advocates for a thorough head-to-toe assessment to identify all injuries and needs.

Integrating the A, B, C, D, E Nursing Assessment into Practice

The A, B, C, D, E nursing assessment is not a static process. It's a dynamic, continuous evaluation adjusted based on the patient's response to interventions. Nurses must adapt the assessment to the unique circumstances and needs of each patient, prioritizing life threats and adjusting their approach accordingly. Regular reassessments are essential to track progress and address any changes in the patient's condition. The ongoing nature of the A, B, C, D, E nursing assessment is critical to optimize patient care.

Conclusion

The A, B, C, D, E nursing assessment is a vital tool for nurses, providing a systematic and prioritized approach to patient evaluation in emergency and critical care situations. By mastering this methodology, nurses can effectively identify and address life-threatening conditions, ensuring prompt interventions and improved patient outcomes. The consistent application of the A, B, C, D, E nursing assessment improves the quality of care provided and underscores the importance of systematic assessment in nursing practice.

FAQs

1. What is the difference between the A, B, C, D, E assessment and a full head-to-toe assessment? The A, B, C, D, E assessment prioritizes immediate life threats, while a head-to-toe assessment is more comprehensive and includes a detailed examination of all body systems. The A, B, C, D, E assessment is typically done initially to rapidly identify and address the most critical problems.
2. Can the A, B, C, D, E assessment be used for non-trauma patients? Yes, the principles of the A, B, C, D, E assessment can be applied to any patient experiencing a critical event, such as respiratory distress or cardiac arrest.
3. How often should the A, B, C, D, E assessment be repeated? The frequency depends on the patient's condition. Critically ill patients may require continuous monitoring and repeated assessments, while stable patients may require less frequent reassessments.
4. What are some common errors in performing the A, B, C, D, E assessment? Common errors include rushing the assessment, failing to systematically address each component, and neglecting to reassess the patient.
5. How does documentation of the A, B, C, D, E assessment support patient care? Thorough documentation provides a clear record of the patient's condition, interventions performed, and response to treatment, facilitating communication among healthcare providers and supporting evidence-based practice.
6. What is the role of teamwork in performing the A, B, C, D, E assessment? Effective teamwork is crucial, with each member having assigned roles and responsibilities for efficient assessment and intervention.
7. How does the A, B, C, D, E assessment contribute to legal protection for nurses? Careful documentation and the systematic approach of the A, B, C, D, E assessment provide a legal record of the care provided, supporting nurses' actions in the event of legal challenges.
8. How can nurses improve their skills in performing the A, B, C, D, E assessment? Regular practice, simulation training, and continuing education are vital for enhancing skills and competency in performing the A, B, C, D, E assessment.
9. How does the A, B, C, D, E assessment integrate with the nursing process? The A, B, C, D, E assessment forms the basis of the assessment phase of the nursing process, guiding the development of nursing diagnoses, interventions, and evaluation of patient outcomes.

a b c d e nursing assessment: Oxford Handbook of Critical Care Nursing Fiona Creed, Jessica Hargreaves, 2016-01-28 Focused on the practical issues of nursing care and nursing procedures, the Oxford Handbook of Critical Care Nursing has been written by nurses, for nurses. Reflecting current best practice, this handbook is an easily accessible and evidence-based guide for all levels of nursing staff working in critical care environments. It provides the nurse at the bedside with the answers to day-to-day problems experienced when caring for critically ill patients, and is also a guide to some of the less commonly encountered issues. Now including more detail on the psychological issues facing critically ill patients and further information on the intricacies of receiving and transferring critically ill patients to and from critical care environments, this handbook is a concise, practical, evidence-based guide for nursing professionals caring for critically ill patients.

a b c d e nursing assessment: Medical and Surgical Emergencies: the ABCDE Approach Ruslan Zinchenko, 2017-09-04 Medical and Surgical Emergencies is based around the ABCDE (Airway, Breathing, Circulation, Disability, Everything Else) approach to the acutely unwell patient, and is designed specifically for medical students and junior doctors. This approach is frequently taught in medical schools and is used in healthcare systems worldwide. The book is scenario-based where readers can work through each case and learn how to manage the acutely unwell patient. Following each case there are a set of questions in a viva format. It is divided into chapters based on different medical and surgical specialties. Each chapter contains several scenarios on common emergencies in those specialties. The style is interactive and encourages usage among small groups in preparation for examinations. The user-friendly layout makes it easy and enjoyable to work through. This book is ideal for students and junior doctors revising for clinical exams, allowing them to learn new things about certain emergencies and to consolidate their knowledge.

a b c d e nursing assessment: Fragility Fracture Nursing Karen Hertz, Julie Santy-Tomlinson, 2018-06-15 This open access book aims to provide a comprehensive but practical overview of the knowledge required for the assessment and management of the older adult with or at risk of fragility

fracture. It considers this from the perspectives of all of the settings in which this group of patients receive nursing care. Globally, a fragility fracture is estimated to occur every 3 seconds. This amounts to 25 000 fractures per day or 9 million per year. The financial costs are reported to be: 32 billion EUR per year in Europe and 20 billion USD in the United States. As the population of China ages, the cost of hip fracture care there is likely to reach 1.25 billion USD by 2020 and 265 billion by 2050 (International Osteoporosis Foundation 2016). Consequently, the need for nursing for patients with fragility fracture across the world is immense. Fragility fracture is one of the foremost challenges for health care providers, and the impact of each one of those expected 9 million hip fractures is significant pain, disability, reduced quality of life, loss of independence and decreased life expectancy. There is a need for coordinated, multi-disciplinary models of care for secondary fracture prevention based on the increasing evidence that such models make a difference. There is also a need to promote and facilitate high quality, evidence-based effective care to those who suffer a fragility fracture with a focus on the best outcomes for recovery, rehabilitation and secondary prevention of further fracture. The care community has to understand better the experience of fragility fracture from the perspective of the patient so that direct improvements in care can be based on the perspectives of the users. This book supports these needs by providing a comprehensive approach to nursing practice in fragility fracture care.

a b c d e nursing assessment: Basic Emergency Care: Approach to the Acutely Ill and Injured World Health Organization, 2018-12-17 Developed by WHO and the International Committee of the Red Cross, in collaboration with the International Federation for Emergency Medicine, Basic Emergency Care (BEC): Approach to the acutely ill and injured is an open-access training course for frontline healthcare providers who manage acute illness and injury with limited resources. BEC teaches a systematic approach to the initial assessment and management of time-sensitive conditions where early intervention saves lives. It includes modules on: the ABCDE and SAMPLE history approach, trauma, difficulty in breathing, shock, and altered mental status. The practical skills section covers the essential time-sensitive interventions for these key acute presentations. The BEC package includes a Participant Workbook and electronic slide decks for each module. BEC integrates the guidance from WHO Emergency Triage, Assessment and Treatment (ETAT) for children, WHO Pocket Book of Hospital Care for Children, WHO Integrated Management of Pregnancy and Childbirth and the Integrated Management of Adult/Adolescent Illness (IMAI).

a b c d e nursing assessment: Rapid Assessment of the Acutely Ill Patient Sheila Adam, Mandy Odell, Jo Welch, 2010-01-11 Rapid Assessment of the Acutely Ill Patient sets out the principles and practices needed for early recognition and assessment of patients either at risk of or showing signs of acute deterioration, or those recently relocated from higher levels of care. The focus is on patient assessment, interpretation and evaluation of data, immediate management of significant problems, ongoing and further assessments in order to improve clinical outcomes. Rapid Assessment of the Acutely Ill Patient provides a framework for a systematic initial patient assessment and explores principles of effective assessment. Body systems are considered in order of life-threatening priority following the ABCDE approach, dealing with the assessment and management of airway, breathing, circulation, disability - and everything else; covering topics such as visual, palpatory and auscultatory assessment, use of additional documented information (charts, notes etc), and interpreting diagnostic investigations. Methods to ensure effective communication and team-working are also discussed. Key features Part of the Essential Clinical Skills for Nurses series Aimed at nurses working in wards and specialist departments Explores the assessment skills required for a rapid response to a patient at risk of becoming acutely unwell Enables students and practitioners to develop practical and interpretative skills Provides a framework for assessment and principles of first line treatment Includes 'Look', 'Listen', 'Feel' and 'Measure' icons

a b c d e nursing assessment: Advanced Paediatric Life Support Advanced Life Support Group (ALSG), 2008-04-15 This international bestseller covers the full advanced paediatric life support course, with the core sections for the abbreviated one-day course clearly picked out. The book provides practical guidance for managing children and infants in the first life-threatening golden hour. This new edition goes beyond immediate management to include stabilisation and transfer.

a b c d e nursing assessment: Clinical Examination Skills for Healthcare Professionals Mark Ranson, Hannah Abbott, Wendy Braithwaite, 2014-01-02 Today, an increasing number of healthcare professionals (including nurses, midwives and members of many allied professions) have to conduct the vital first stage in a patient's journey – taking a clinical history and conducting an effective physical examination. This book offers clear, practical guidance on the fundamentals of clinical examination for any practitioner who wishes to understand their patient's specific needs and to plan appropriate care. Recognising that readers will come from a diverse range of clinical backgrounds and roles, the opening chapter (on consultation and the skills needed to take an accurate clinical history) underpins the systems-based approach. This, combined with the use of case study examples, allows healthcare professionals to focus on the principles of examining the system or systems that are most relevant to their specific area of practice. The book also includes a helpful glossary and list of abbreviations. The authors come from the same diverse range of professions for whom the book has been written, and their wealth of knowledge and experience enables them to understand the challenges facing today's healthcare professionals. Contents include: Consultation and clinical history-taking skills Respiratory assessment Cardiovascular assessment Gastrointestinal assessment Neurological assessment Genitourinary assessment Musculoskeletal assessment Obstetric assessment Mental health assessment Perioperative assessment

a b c d e nursing assessment: Nursing the Acutely Ill Adult David Clarke, Alison Ketchell, 2017-09-16 Nurses in all areas of clinical practice must be able to recognise, assess and manage changes to a patient's condition. With a strong focus on pathophysiology, the comprehensive new edition of this essential textbook retains the case study approach that made the first edition so popular with students and educators alike. Offering further reading resources and definitions of key terms to aid learning it develops nurses' key skills such as identifying and explaining the pathophysiology of sepsis; recognising and managing hypovolaemic shock; assessment and management of cardiovascular, neurological and traumatic injury; and understanding priorities in initial stroke assessment and management, including nursing care following administration of a thrombolytic drug. Written by contributors from a range of clinical and academic backgrounds, Nursing the Acutely Ill Adult is essential reading for all students within the adult branch of nursing, a comprehensive book guide to understanding the common signs and symptoms related to serious acute illness in adults. New to this Edition: - A chapter on strokes to account for the significant changes that have occurred in the management of the hyper-acute phase of stroke - A chapter on sepsis in response to feedback from students, staff and lead clinicians - Case studies revised to accommodate a wider variety of settings - Covers possible interventions for problems related to diabetes, chronic respiratory disease and renal disease

a b c d e nursing assessment: Equipment in Anaesthesia and Critical Care Daniel Aston, Angus Rivers, Asela Dharmadasa, 2013-10-15 Highly commended in the Anaesthesia category of the 2014 BMA Medical Books awards! From reviews: Altogether, this textbook offers an excellent detailed overview of basic principles, mechanics, and physics of technical equipment used in anaesthesia and intensive care medicine. Critical Care, Feb 2014 This book is excellent. I have read a number of equipment related books and found most of them stale and filled with minutia. Instead

this fresh look at equipment really makes it interesting to read and keeps your attention. With sections that give quick answers to how things work, advantages and disadvantages, in an easy to read format you get exactly what you want to know RIGHT away. In addition the full color photos and well done charts really add to the depth of this book. It is my opinion this may be one of the best books on the market for quick review of anesthesia and critical care equipment. Let's be honest, no one is sitting at home reading equipment books for pleasure so when you NEED the information you likely need it right away. This book does exactly that; easy format, clear and concise information with everything you need to know about a piece of equipment easy to find and within a page or two. I would recommend this to all trainees in anesthesia but also for those providers who like to be prepared in the operating room to deal with any issue that might arise. www.nurse-anesthesia.org, 8 Feb 2014 Equipment in Anaesthesia and Critical Care specifically follows the syllabus published by the Royal College of Anaesthetists and is the perfect guide for candidates studying for their FRCA qualifications. The book is beautifully illustrated and features high quality colour photographs throughout. The text is engaging and comprehensive, relating each piece of equipment back to its basic physics, mechanics and clinical context. The clear, concise and standardised format means that information is easy to access and perfect for revision. Every major piece of equipment is featured alongside colour photos, reproducible line diagrams, and information on its uses, how it works, pros and cons, and safety considerations. The authors, all senior registrars in anaesthesia and critical care, appreciate exactly what candidates need to know to pass the FRCA exam. They have identified and tackled difficult subjects which are often glossed over or omitted in other resources, to produce a book that is comprehensive, engaging and to the point. In addition to FRCA candidates, the book is also suitable for operating department practitioners, critical care staff, and physicians with an interest in anaesthesia or critical care.

a b c d e nursing assessment: Assessing and Managing the Acutely Ill Adult Surgical Patient Fiona McArthur-Rouse, Sylvia Prosser, 2008-04-15 Assessing and managing the acutely ill adult surgical patient focuses on major surgical conditions and interventions commonly encountered in District General Hospitals which potentially require intensive monitoring and intervention. It emphasizes the importance of thorough assessment and interpretation of clinical data, and provides the necessary knowledge to help nurses make sense of their findings and to integrate theory and practice in relation to surgical care. Part one addresses principles of surgical care for all patients undergoing surgery — including pre-operative assessment and preparation, the peri-operative period and post-operative recovery, post-operative pain management and psychosocial aspects of surgery — which underpin the knowledge and rationale for practice. Part two considers specific surgical conditions and interventions, organised according to surgical specialities. Each chapter considers the underlying patho-physiology, investigation and diagnosis, assessment, monitoring and management of common acute surgical conditions within that specialty.

a b c d e nursing assessment: Critical Care Nursing Sheila K. Adam, Sheila Adam, John Welch, Sue Osborne, 2017 The third edition of this popular work encompasses the knowledge, skills and expertise used in nursing the critically ill patient

a b c d e nursing assessment: Monitoring the Critically Ill Patient Philip Jevon, Beverley Ewens, 2012-03-20 Monitoring the Critically Ill Patient is an invaluable, accessible guide to caring for critically ill patients on the general ward. Now fully updated and improved throughout, this well-established and handy reference guide text assumes no prior knowledge and equips students and newly-qualified staff with the clinical skills and knowledge they need to confidently monitor patients at risk, identify key priorities, and provide prompt and effective care. This new edition includes the following five new chapters: Monitoring the critically ill child Monitoring the critically ill pregnant patient Monitoring the patient with infection and related systemic inflammatory response Monitoring a patient receiving a blood transfusion Monitoring pain

a b c d e nursing assessment: How to Treat People: A Nurse's Notes Molly Case, 2019-09-10 "Deserves a place in the rich contemporary canon of medical memoirs." —Guardian Weaving together medical history, art, memoir, and science, How to Treat People is a poignant memoir that

beautifully explores the intricacies of the human condition. As a trainee nurse, Molly Case learns to care for her patients, sharing not only their pain, but also life-affirming moments of hope. In doing so, she offers a compelling account of the processes that keep them alive, from respiratory examinations to surgical prep, and of the extraordinary moments of human connection that sustain both nurse and patient.

a b c d e nursing assessment: Functional Assessment for Adults with Disabilities

National Academies of Sciences, Engineering, and Medicine, Health and Medicine Division, Board on Health Care Services, Committee on Functional Assessment for Adults with Disabilities, 2019-08-31 The U.S. Social Security Administration (SSA) provides disability benefits through the Social Security Disability Insurance (SSDI) and Supplemental Security Income (SSI) programs. To receive SSDI or SSI disability benefits, an individual must meet the statutory definition of disability, which is the inability to engage in any substantial gainful activity [SGA] by reason of any medically determinable physical or mental impairment which can be expected to result in death or which has lasted or can be expected to last for a continuous period of not less than 12 months. SSA uses a five-step sequential process to determine whether an adult applicant meets this definition. Functional Assessment for Adults with Disabilities examines ways to collect information about an individual's physical and mental (cognitive and noncognitive) functional abilities relevant to work requirements. This report discusses the types of information that support findings of limitations in functional abilities relevant to work requirements, and provides findings and conclusions regarding the collection of information and assessment of functional abilities relevant to work requirements.

a b c d e nursing assessment: Acute Medical Emergencies Richard Harrison (M.D.), Lynda

Daly, 2006-01-01 This title is directed primarily towards health care professionals outside of the United States. It is an essential pocket guide for nurses coping with patients with acute medical conditions. It focuses on events within the first critical twenty-four hours of admission and provides an up-to-date, evidence-based guide to the management of these patients. The most common emergency medical conditions are described and explained in terms of the underlying disease mechanisms. The book also describes the assessment, observations and management in relation to disease processes and in line with the latest guidelines and protocols. Nursing care is related to the underlying disease.

a b c d e nursing assessment: Emergency Nursing Made Incredibly Easy! Lippincott Williams

& Wilkins, 2014-11-11 Completely revised and updated to reflect the latest guidelines and innovation, Emergency Nursing Made Incredibly Easy!, Second Edition, offers essential information on emergency, trauma, and critical care. Presented in the easy-to-learn and enjoyable Incredibly Easy! format, it covers emergency care basics, including patient assessment and triage, trauma, disease crises, and patient and family communication. It also addresses legal issues such as handling evidence and documentation, and holistic issues such as pain and end-of-life care. Chapters detail emergency nursing by body system and cover shock, multi-system traumas, environmental emergencies, disaster preparedness, communicable diseases, and obstetric and pediatric emergencies. The presentation features light-hearted cartoons and humor, Memory Joggers and other icons, and end-of-chapter review questions.

a b c d e nursing assessment: Critical Care Nursing in Resource Limited Environments

Chris Carter, 2019-06-05 All hospitals have critically ill patients, and their management depends upon the resources available. In many low income countries, critically ill patients may be admitted to a critical care unit; however, many are nursed on wards due to a lack of critical care beds or simply die before they reach the hospital. This book provides guidance on the unique situations for nurses working in these challenging environments, while considering ethical decision-making, providing appropriate services, and the types of patients admitted. Topics covered include: working in a resource limited environment; cultural awareness and international agendas; provision and access to healthcare services; ethical considerations in the context of resource limited environments; best practice and knowledge regarding rehabilitation, pain management, managing a major incident; relevant research concerning resource limited environments. Critical Care Nursing in Resource

Limited Environments prepares readers to consider how best to utilise their skills and deliver safe patient care within a resource limited context. Each easy-to-read chapter provides core knowledge and relevant research, as well as useful ideas and solutions, with further reading sections to signpost readers to key international resources. This text provides practical ideas for nurses working in critical care and defence nursing, and acute areas in resource limited environments. It can also be used to support educational courses and pre-deployment training for nurses hoping to work in Global Health.

a b c d e nursing assessment: Stress Echocardiography Eugenio Picano, 2015-10-06 This sixth edition is enriched by over 300 figures, 150 tables and a video-companion collecting more than 100 cases also presented in the format of short movies and teaching cartoons. This extensively revised and enlarged edition of this long-seller documents the very significant advances made since the fifth (2009) edition and is entirely written by Eugenio Picano, a pioneer in the field sharing his lifetime experience with the help of an international panel of 50 contributors from 22 countries representing some of the best available knowledge and expertise in their respective field. In a societal and economic climate of increasing pressure for appropriate, justified and optimized imaging, stress echocardiography offers the great advantages of being radiation-free, relatively low cost, and with a staggering versatility: we can get more (information) with less (cost and risk). For a long time, the scope and application of stress echo remained focused on coronary artery disease. In the last ten years, it has exploded in its breadth and variety of applications. From a black-and-white, one-fits-all approach (wall motion by 2D-echo in the patient with known or suspected coronary artery disease) now we have moved on to a omnivorous, next-generation laboratory employing a variety of technologies (from M-Mode to 2D and pulsed, continuous, color and tissue Doppler, to lung ultrasound and real time 3D echo, 2D speckle tracking and myocardial contrast echo) on patients covering the entire spectrum of severity (from elite athletes to patients with end-stage heart failure) and ages (from children with congenital heart disease to the elderly with low-flow, low-gradient aortic stenosis).

a b c d e nursing assessment: Nursing the Acutely Ill Adult: Case Book Karen Page, Aidin McKinney, 2012-09-16 Nursing the Acutely ill Adult is a comprehensive text ... Each chapter draws on the clinical and academic expertise of the author and follows a structured approach that explores the case problems, altered physiology and nursing interventions and care. It is an ideal reference resource for nurses who wish to reflect and explore the evidence base underpinning the complexities of nursing acutely ill adults. Alison Eddleston, Senior Lecturer Acute, Operative and Critical Care, School of Health, University of Central Lancashire, UK This informative case-based book encourages the reader to critically consider the assessment and care needed by acutely ill adult patients with a variety of underlying conditions. Nursing and other healthcare students ... should find that the book helps with the development of an integrated mindset and evidence-based decision making. Janice Christie, Senior Lecturer in Public Health and Primary Care, City University London, UK The book will enable practitioners to approach the assessment of patients with a range of acute conditions in a structured manner. The case scenarios are very realistic and there are good explanations of underlying patho-physiology. There is also a well structured explanation of investigations and priority interventions ... This book will enable the development of expertise in assessment and prioritising of care in a range of settings. Laurence Leonard, Senior Lecturer, Kingston University and St George's, University of London, UK The complexity of caring for patients who become acutely ill or have deteriorated can be a daunting challenge for nurses. Part of a case book series, this accessible book contains 17 in-depth case studies relating to care of the acutely ill adult. The cases combine pathophysiology, pharmacology and nursing care in realistic clinical settings, providing an engaging resource for nursing students taking acute care modules. This handy book: Follows a step-by-step question and answer format Facilitates the application of theory to practice through the use of clinical case studies Considers the most common acute illness scenarios that are frequently encountered by practitioners Integrates knowledge of pathological processes, applied pharmacology and related nursing implications to acute illness Nursing the Acutely Ill Adult: Case Book offers a

unique way of relating theory to practice, making it key reading for undergraduate nursing students. It will also be beneficial to students in areas such as intensive care as well as nurse educators looking for a way to bridge the gap between the classroom and clinical practice. Contributors: Patrick Gallagher, Niall McKenna, Billie Joan Rice.

a b c d e nursing assessment: Oxford Handbook of Adult Nursing George Castledine, Ann Close, 2009 This unique book gives expert and practical advice on all aspects of the nurse's role. It provides a complete picture of the care of adults with chronic and acute illness, and covers the role of the nurse as manager and co-ordinator of care. It is written by practising nurses and is an invaluable companion.

a b c d e nursing assessment: Critical Care Outreach Lee Cutler, Wayne Robson, 2006-07-11 Following the publication of the department of health document - Comprehensive Critical Care (2000), the majority of hospitals in England have set up Critical Care Outreach Teams. The Government provided a significant sum of money for hospitals to set up outreach services. There are now calls for an evaluation of their impact. The book is set out in five key sections. Each section features chapters that address the conceptual and real life issues. In each section there is a chapter, set out as a case study example, demonstrating how innovative practices and service developments are going on around critical care outreach. The book will draw upon the knowledge, experience and clinical expertise of senior critical care nurses and doctors from a critical care network. The book will have a definite practical application and will provide tips to enhance practice. * Chapters contain useful 'how to' guides, prompts for critical thinking and case studies. * Very little has previously been published on this topic

a b c d e nursing assessment: How To Break Bad News Robert Buckman, 1992-08-08 For many health care professionals and social service providers, the hardest part of the job is breaking bad news. The news may be about a condition that is life-threatening (such as cancer or AIDS), disabling (such as multiple sclerosis or rheumatoid arthritis), or embarrassing (such as genital herpes). To date medical education has done little to train practitioners in coping with such situations. With this guide Robert Buckman and Yvonne Kason provide help. Using plain, intelligible language they outline the basic principles of breaking bad new and present a technique, or protocol, that can be easily learned. It draws on listening and interviewing skills that consider such factors as how much the patient knows and/or wants to know; how to identify the patient's agenda and understanding, and how to respond to his or her feelings about the information. They also discuss reactions of family and friends and of other members of the health care team. Based on Buckman's award-winning training videos and Kason's courses on interviewing skills for medical students, this volume is an indispensable aid for doctors, nurses, psychotherapists, social workers, and all those in related fields.

book emphasizes systematic assessment, careful monitoring, and timely escalation, and is essential reading for all nurses working in acute care settings.

a b c d e nursing assessment: The Pediatric Emergency Medicine Resource Marianne Gausche-Hill, 2007 APLS: The Pediatric Emergency Medicine Resource, Revised Fourth Edition offers the information necessary to assess and manage critically ill or injured children during the first hours in the emergency department. The Revised Fourth Edition of APLS is truly the body of knowledge in pediatric emergency medicine. If you want the newest, most comprehensive reference on pediatric emergency medicine, the Revised Fourth Edition will meet your needs. Developed by expert authors, editors, and faculty from both AAP and ACEP, the new APLS is a unique teaching and learning system for individual physicians, residents, students, and APLS instructors and course directors. The Fourth Edition of APLS has been revised and expanded to cover new conclusions drawn from reason, fact, and experience to the benefit of sick and injured children worldwide. Together, AAP and ACEP developed APLS into a new, stand-alone course, offering continuing medical education units and an APLS course completion card. The course is highly interactive with small group scenarios, hands-on skill stations, and case-based lectures.

a b c d e nursing assessment: Emergency Triage Manchester Triage Group, 2008-04-15 The Manchester Triage System (MTS) is the most widely used triage system in the UK, Europe and Australia, with tens of millions of patients being processed through hospital emergency departments. Emergency Triage is the core text for the MTS which utilises a risk averse system of prioritisation for patients in all unscheduled care settings, and as such it is an essential text for all emergency department staff using the MTS, in particular triage nurses themselves. The second edition has been revised throughout and takes in the changes in practice introduced into MTS since the book was first published. These include: Redesigned and expanded flow charts Additional charts for allergy and palpitations New practices - such as the possibility of revascularisation for patients with stroke New discriminators, for example acute neurological deficit and significant respiratory history Redefinition of existing discriminators Also new to this edition is the incorporation of sections on the use of the risk averse system in telephone triage, in settings where 'streaming' takes place and as an early warning score for patients in all unscheduled care settings. The tone of this edition reflects the more up to date, modified approach to triage while retaining the principles of clinical prioritisation, which in the authors' words "remains a central plank of clinical risk management in emergency care". Emergency Triage is an essential handbook for all clinicians involved in unscheduled care settings such as emergency care, walk-in centres, minor injury units, primary care out of hours services.

a b c d e nursing assessment: Mini Nutritional Assessment (MNA) Bruno J. Vellas, Philip J. Garry, Yves Guigoz, Nestlé Nutrition Services, 1999 This book is the first of a new series which will present the proceedings of the newly established Nestlé Nutrition Workshop Series: Clinical & Performance Programme aimed at adult nutrition. Undernutrition is a common phenomenon in elderly people, and malnutrition reaches significant levels in those being in hospital, nursing homes or home care programs. Consequences of malnutrition often go unrecognised owing to the lack of specific validated instruments to assess nutritional status in frail elderly persons. The Mini Nutritional Assessment (MNA) provides a single, rapid assessment of nutritional status in the elderly of different degrees of independence, allowing the prevalence of protein-energy malnutrition to be determined and to evaluate the efficacy of nutritional intervention and strategies. Easy, quick and economical to perform, it enables staff to check the nutritional status of elderly people when they enter hospitals or institutions and to monitor changes occurring during their stay. Moreover, the MNA is predictive of the cost of care and length of stay in hospital. This publication will be of immense assistance to heads of geriatric teaching units, teachers in nutrition, clinicians general practitioners and dieticians, enabling them to better detect, recognise and start treatment of malnutrition in the elderly.
