In this book, we'll explore seven wonders of space technology. Scientists and engineers have built vehicles and equipment to explore the farthest reaches of the solar system. Orbiting satellites and telescopes have given us everything from more accurate weather reports to glimpses back to the beginning of the universe. International teams have built an orbiting space laboratory and are working on plans for human lunar settlements and missions to other planets. Learn about the people and the science behind these amazing advances in space technology.

[He] takes us on a lively tour of engineers, their creations and their necessary turns of mind. --Los Angeles Times From the Ferris wheel to the integrated circuit, feats of engineering have changed our environment in countless ways, big and small. In *Remaking the World: Adventures in Engineering*, Duke University's Henry Petroski focuses on the big: Malaysia's 1,482-foot Petronas Towers as well as the Panama Canal, a cut through the continental divide that required the excavation of 311 million cubic yards of earth. *Remaking the World* tells the stories behind the man-made wonders of the world, from squabbles over the naming of the Hoover Dam to the effects the Titanic disaster had on the engineering community of 1912. Here, too, are the stories of the personalities behind the wonders, from the jaunty Isambard Kingdom Brunel, designer of nineteenth-century transatlantic steamships, to Charles Steinmetz, oddball genius of the General Electric Company, whose office of preference was a battered twelve-foot canoe. Spirited and absorbing, *Remaking the World* is a celebration of the creative instinct and of the men and women whose inspirations have immeasurably improved our world. Petroski [is] America's poet laureate of technology. . . . *Remaking the World* is another fine book. --Houston Chronicle *Remaking the World* really is an adventure in engineering. --San Diego Union-Tribune

7 engineering wonders of the world: The Seven Wonders of the Ancient World Peter A. Clayton, Martin Price, 1988 First published in 1988. Can you name the Seven Wonders of the Ancient World? Did they even exist? The Pharos at Alexandria survived into the Middle Ages, but the Hanging Gardens of Babylon exist only in references by ancient authors and the Colossus of Rhodes if too improbable to have existed in the form and place traditionally ascribed to it. *The Seven Wonders of the Ancient World* sets the record straight, with an attractive account of each Wonder in the context in which it was built. The authors combine ancient sources with the results of modern scholarship and excavations to recreate a vivid picture of the Seven Wonders. All experts in their specialist fields, the contributors bring together facts and background that are remarkably difficult to find from any other single source and establish for the first time the archaeology and location of each Wonder.

7 engineering wonders of the world: The Fourth Industrial Revolution Klaus Schwab,

2017-01-03 World-renowned economist Klaus Schwab, Founder and Executive Chairman of the World Economic Forum, explains that we have an opportunity to shape the fourth industrial revolution, which will fundamentally alter how we live and work. Schwab argues that this revolution is different in scale, scope and complexity from any that have come before. Characterized by a range of new technologies that are fusing the physical, digital and biological worlds, the developments are affecting all disciplines, economies, industries and governments, and even challenging ideas about what it means to be human. Artificial intelligence is already all around us, from supercomputers, drones and virtual assistants to 3D printing, DNA sequencing, smart thermostats, wearable sensors and microchips smaller than a grain of sand. But this is just the beginning: nanomaterials 200 times stronger than steel and a million times thinner than a strand of hair and the first transplant of a 3D printed liver are already in development. Imagine “smart factories” in which global systems of manufacturing are coordinated virtually, or implantable mobile phones made of biosynthetic materials. The fourth industrial revolution, says Schwab, is more significant, and its ramifications more profound, than in any prior period of human history. He outlines the key technologies driving this revolution and discusses the major impacts expected on government, business, civil society and individuals. Schwab also offers bold ideas on how to harness these changes and shape a better future—one in which technology empowers people rather than replaces them; progress serves society rather than disrupts it; and in which innovators respect moral and ethical boundaries rather than cross them. We all have the opportunity to contribute to developing new frameworks that advance progress.
