academy of science sf nightlife: State of the World 2010 Worldwatch Institute, 2013-07-04
Many of the environmental and social problems we face today are symptoms of a deeper systemic failing: a dominant cultural paradigm that encourages living in ways that are often directly counter to the realities of a finite planet. This paradigm, typically referred to as 'consumerism,' has already spread to cultures around the world and has led to consumption levels that are vastly unsustainable. If this pattern spreads further there will be little possibility of solving climate change or other environmental problems that are poised to dramatically disrupt human civilization. It will take a sustained, long-term effort to redirect the traditions, social movements and institutions that shape consumer cultures towards becoming cultures of sustainability. These institutions include schools, the media, businesses and governments. Bringing about a cultural shift that makes living sustainably as 'natural' as a consumer lifestyle is today will not only address urgent crises like climate change, it could also tackle other symptoms like extreme income inequity, obesity and social isolation that are not typically seen as environmental problems. State of the World 2010 paints a picture of what this sustainability culture could look like, and how we can - and already are - making the shift.

academy of science sf nightlife: *The Value of Museums* John H. Falk, 2021-10-11 Written by one of the world's leading authorities on the public use of museums, *The Value of Museums: Enhancing Societal Well-Being* provides a timely and compelling way for museum professionals to better understand and explain the benefits created by museum experiences. The key insight this book advances is that museum experiences successfully support a major driver of human behavior - the desire for enhanced well-being. Knowingly or not, the business of museums has always been to support and enhance the public's personal, intellectual, social and physical well-being. Over the years, museums have excelled at this task, as evidenced by the almost indelible memories museum experiences engender. People report that museum experiences make them feel better about themselves, more informed, happier, healthier and more enriched; all outcomes directly related to enhanced well-being. Historically, benefits such as enhanced well-being were seen as vague and intangible, but Falk shows that enhanced well-being, when properly conceptualized, can not only be defined and measured, but also can be monetized. However, as many in the museum world are painfully aware, what worked yesterday for museums may not work in the future as recessions and pandemics rapidly alter the landscape. Although insights about past experiences are interesting, what is needed now is a roadmap for the future. Fortunately for museums, the public's need for enhanced well-being will not be disappearing any time soon; enhanced well-being is now, and will always be, a fundamental and on-going human need. What has and will change, though, is how people choose to satisfy their well-being-related needs. *The Value of Museums* provides tangible suggestions for how museum professionals can build on their legacy of success at supporting the public's well-being, adapting to changing times, and remaining relevant and sustainable in the future.

academy of science sf nightlife: On the Backs of Tortoises Elizabeth Hennessy, 2019-10-29 An insightful exploration of the iconic Galápagos tortoises, and how their fate is inextricably linked to our own in a rapidly changing world. Finalist for the 2020 E.O. Wilson Literary Science Writing Award, sponsored by PEN America Literary Awards The Galápagos archipelago is often viewed as a last foothold of pristine nature. For sixty years, conservationists have worked to restore this evolutionary Eden after centuries of exploitation at the hands of pirates, whalers, and island settlers. This book tells the story of the islands' namesakes—the giant tortoises—as coveted food sources, objects of natural history, and famous icons of conservation and tourism. By doing so, it brings into stark relief the paradoxical, and impossible, goal of conserving species by trying to restore a past state of prehistoric evolution. The tortoises, Elizabeth Hennessy demonstrates, are not prehistoric, but rather microcosms whose stories show how deeply human and nonhuman life are entangled. In a world where evolution is thoroughly shaped by global history, Hennessy puts forward a vision for conservation based on reckoning with the past, rather than trying to erase it. "Fresh, insightful . . . Hennessy's melding of human and natural history makes for thought-provoking reading." —Booklist (starred review) "Gripping . . . well-researched and thought-provoking . . . whether you're well-versed in the intricacies of conservation or have only just begun to long for a look at the tortoises yourself. Khakshooy, Francesco Chiappelli, 2018-06-23 There is an ever-increasing emphasis on evidence-based medicine that is distinguished by systematic crafting of the patient-centered research question, detailed literature searches, and careful appraisal of the resulting evidence. The consensus that ultimately emerges must then be applied in specific clinical settings, and it is to this process that translational effectiveness analysis refers. This portable and easy-to-use handbook is intended as a practical teaching guide on translational effectiveness for students and clinicians. Specifically, it will serve as a primer on patient-centered outcomes research methodology in the health sciences and explain how to acquire and understand the fundamental data that determine which reports are valued as the "best available" evidence. academy of science sf nightlife: Different Frans de Waal, 2022-04-05 "Every new book by Frans de Waal is a cause for excitement, and this one is no different. A breath of fresh air in the cramped debate about the differences between men and women. Fascinating, nuanced, and very timely." —Rutger Bregman, author of *Humankind: A Hopeful History* In *Different*, world-renowned primatologist Frans de Waal draws on decades of observation and studies of both human and animal behavior to argue that despite the linkage between gender and biological sex, biology does not automatically support the traditional gender roles in human societies. While humans and other primates do share some behavioral differences, biology offers no justification for existing gender inequalities. Using chimpanzees and bonobos to illustrate this point—two ape relatives that are genetically equally close to humans—de Waal challenges widely held beliefs about masculinity and femininity, and common assumptions about authority, leadership, cooperation, competition, filial bonds, and sexual behavior. Chimpanzees are male-dominated and violent, while bonobos are female-dominated and peaceful. In both species, political power needs to be distinguished from physical dominance. Power is not limited to the males, and both sexes show true leadership capacities. *Different* is a fresh and thought-provoking approach to the long-running debate about the balance between nature and nurture, and where sex and gender roles fit in. De Waal peppers his discussion with details from his own life—a Dutch childhood in a family of six boys, his marriage to a French woman with a different orientation toward gender, and decades of academic turf wars over outdated scientific theories that have proven hard to dislodge from public discourse. He discusses sexual orientation, gender identity, and the limitations of the gender binary, exceptions to which are also found in other primates. With humor, clarity, and compassion, *Different* seeks to broaden the conversation about human gender dynamics by promoting an inclusive model that embraces differences, rather than negating them.

academy of science sf nightlife: How Far the Light Reaches Sabrina Imbler, 2022-12-06 A fascinating tour of creatures from the surface to the deepest ocean floor: this miraculous, transcendental book invites us to envision wilder, grander, and more abundant possibilities for the way we live (Ed Yong, author of *An Immense World*). A queer, mixed race writer working in a largely white, male field, science and conservation journalist Sabrina Imbler has always been drawn to the mystery of life in the sea, and particularly to creatures living in hostile or remote environments. Each essay in their debut collection profiles one such creature, including: ·the mother octopus who starves herself while watching over her eggs, ·the Chinese sturgeon whose migration route has been decimated by pollution and dams, ·the bizarre, predatory Bobbitt worm (named after Lorena), ·the common goldfish that flourishes in the wild, ·and more. Imbler discovers that some of the most radical models of family, community, and care can be found in the sea, from gelatinous chains that are both individual organisms and colonies of clones to deep-sea crabs that have no need for the sun, nourished instead by the chemicals and heat throbbing from the core of the Earth. Exploring themes of adaptation, survival, sexuality, and care, and weaving the wonders of marine biology with stories of their own family, relationships, and coming of age, *How Far the Light Reaches* is a shimmering, otherworldly debut that attunes us to new visions of our world and its miracles. academy of science sf nightlife: Claude Emma Bland Smith, 2024-08-06 *Claude* is the story of the California Academy of Sciences' beloved albino alligator, from his birth in Louisiana to his present day life in his swamp at the Academy. Ultimately, Claude's hopeful tale is a celebration of individuality and the joy in finding those who appreciate you for exactly who you are.--Booklist *Claude* is a celebrity alligator and the mascot for San Francisco's California Academy of Sciences. His story started almost 25 years ago in Louisiana, where he hatched out of his egg to discover he looked different from the other hatchlings. They were green and Claude was white. The other hatchlings avoided him, and his color made him vulnerable to predators. So Claude went to a special zoo that cared for alligators where he lived in a pen by himself. Now he was safe--but alone. One

day, scientists at the California Academy of Sciences heard about him and asked the zoo if he could come and live in the Academy's swamp. He made a 2,800 mile journey to his new home, where he had a surprise--he would share his swamp with Bonnie, an alligator who the scientists hoped would be a friend for Claude. Unfortunately, Bonnie didn't like Claude's differences either, so she was moved to another home. But then Claude was alone again--or was he? With Bonnie gone, Claude began to interact with the five enormous snapping turtles who shared his swamp. The turtles didn't mind at all that Claude was different! And neither do the millions of people who visit him every year. They know that Claude's differences are exactly what makes him special. Claude includes back matter with answers to frequently asked questions about the famous alligator, including information about albinism in animals.

Over the last fifty years, the nation's top live-work-play cities have proven themselves more than just vibrant urban environments for the elite. They are attracting a cross-section of the population from across the U.S. and are preferred destinations for immigrants of all income strata. This is creating a virtuous circle wherein economic growth enhances property values, stronger real estate markets sustain more reliable tax bases, and solid municipal revenues pay for better services that further attract businesses and talented individuals. Yet, just a generation ago, cities like New York, Boston, Washington, San Francisco, and Miami were broke (financially and physically), scarred by violence, and prime examples of urban dysfunction. How did the turnaround happen? And why are other cities still stuck with the hollow downtowns and sprawling suburbs that make for a 9-to-5 urban configuration? Hugh Kelly's cross-disciplinary research identifies the ingredients of success, and the recipe that puts them together.

academy of science sf nightlife: Cheddar Gordon Edgar, 2015 Cheddar is the world's most ubiquitous and beloved cheese. More than that, cheddar holds a key to understanding our food politics and even our cultural identity. In 'Cheddar', Gordon Edgar (Cheesemonger) traces the unexplored history of cheddar, with both wry humor and an eye toward its future. Cheddar has something to tell us about this country: from the way people rally to certain types of cheddar but not others, to the gradual transformation of a once artisan cheese into big commodity blocks (and back again) and the effect that has had on rural communities. One of the first cheeses to be industrialized, cheddar's progression from farmstead wheels to machine-extruded singles mirrors that of our entire food system. The resurgence of traditional cheesemaking over the last few decades, in turn, speaks to ways that we're redefining how food is produced. Edgar also answers some key questions about cheddar. Is it the most popular cheese in the land? Did England invent it and America cheapen it? Is today's 40-pound block a precursor to Velveeta? You'll find these answers and more in 'Cheddar', a book as thought-provoking as it is entertaining and that reveals what a familiar food has to tell us about ourselves and our culture--Page 4 of cover.

academy of science sf nightlife: The Social Impact of AIDS in the United States National Research Council, Division of Behavioral and Social Sciences and Education, Commission on Behavioral and Social Sciences and Education, Panel on Monitoring the Social Impact of the AIDS Epidemic, 1993-02-01 Europe's Black Death contributed to the rise of nation states, mercantile economies, and even the Reformation. Will the AIDS epidemic have similar dramatic effects on the social and political landscape of the twenty-first century? This readable volume looks at the impact of AIDS since its emergence and suggests its effects in the next decade, when a million or more Americans will likely die of the disease. The Social Impact of AIDS in the United States addresses some of the most sensitive and controversial issues in the public debate over AIDS. This landmark book explores how AIDS has affected fundamental policies and practices in our major institutions, examining: How America's major religious organizations have dealt with sometimes conflicting values: the imperative of care for the sick versus traditional views of homosexuality and drug use. Hotly debated public health measures, such as HIV antibody testing and screening, tracing of sexual contacts, and quarantine. The potential risk of HIV infection to and from health care workers. How AIDS activists have brought about major change in the way new drugs are brought to the marketplace. The impact of AIDS on community-based organizations, from volunteers caring for individuals to the highly political ACT-UP organization. Coping with HIV infection in prisons. Two case studies shed light on HIV and the family relationship. One reports on some efforts to gain legal recognition for nonmarital relationships, and the other examines foster care programs for newborns with the HIV virus. A case study of New York City details how selected institutions interact to give what may be a picture of AIDS in the future. This clear and comprehensive presentation will be of interest to anyone concerned about AIDS and its impact on the country: health professionals, sociologists, psychologists, advocates for at-risk populations, and interested individuals.

academy of science sf nightlife: Art School Steven Henry Madoff, 2009-09-11 Leading international artists and art educators consider the challenges of art education in today's dramatically changed art world. The last explosive change in art education came nearly a century ago, when the German Bauhaus was formed. Today, dramatic changes in the art world—its increasing professionalization, the pervasive power of the art market, and fundamental shifts in art-making itself in our post-Duchampian era—combined with a revolution in information technology, raise fundamental questions about the education of today's artists. Art School (Propositions for the

21st Century) brings together more than thirty leading international artists and art educators to reconsider the practices of art education in academic, practical, ethical, and philosophical terms. The essays in the book range over continents, histories, traditions, experiments, and fantasies of education. Accompanying the essays are conversations with such prominent artist/educators as John Baldessari, Michael Craig-Martin, Hans Haacke, and Marina Abramovic, as well as questionnaire responses from a dozen important artists—among them Mike Kelley, Ann Hamilton, Guillermo Kuitca, and Shirin Neshat—about their own experiences as students. A fascinating analysis of the architecture of major historical art schools throughout the world looks at the relationship of the principles of their designs to the principles of the pedagogy practiced within their halls. And throughout the volume, attention is paid to new initiatives and proposals about what an art school can and should be in the twenty-first century—and what it shouldn't be. No other book on the subject covers more of the questions concerning art education today or offers more insight into the pressures, challenges, risks, and opportunities for artists and art educators in the years ahead. Contributors Marina Abramovic, Dennis Adams, John Baldessari, Ute Meta Bauer, Daniel Birnbaum, Saskia Bos, Tania Bruguera, Luis Camnitzer, Michael Craig-Martin, Thierry de Duve, Clémentine Deliss, Charles Esche, Liam Gillick, Boris Groys, Hans Haacke, Ann Lauterbach, Ken Lum, Steven Henry Madoff, Brendan D. academy of science sf nightlife: This is Your Brain on Music Daniel Levitin, 2019-07-04 From the author of *The Changing Mind* and *The Organized Mind* comes a New York Times bestseller that unravels the mystery of our perennial love affair with music ***** 'What do the music of Bach, Depeche Mode and John Cage fundamentally have in common?' Music is an obsession at the heart of human nature, even more fundamental to our species than language. From Mozart to the Beatles, neuroscientist, psychologist and internationally bestselling author Daniel Levitin reveals the role of music in human evolution, shows how our musical preferences begin to form even before we are born and explains why music can offer such an emotional experience. In *This Is Your Brain On Music* Levitin offers nothing less than a new way to understand music, and what it can teach us about ourselves. ***** 'Music seems to have an almost wilful, evasive quality, defying simple explanation, so that the more we find out, the more there is to know . . . Daniel Levitin's book is an eloquent and poetic exploration of this paradox' Sting 'You'll never hear music in the same way again' Classic FM magazine 'Music, Levitin argues, is not a decadent modern diversion but something of fundamental importance to the history of human development' Literary Review

academy of science sf nightlife: Who's Black and Why? Henry Louis Gates, Jr., Andrew S. Curran, 2022-01-01 A fascinating, if disturbing, window onto the origins of racism. --Publishers Weekly The eighteenth-century essays published for the first time in *Who's Black and Why?* contain a world of ideas--theories, inventions, and fantasies--about what blackness is, and what it means. To read them is to witness European intellectuals, in the age of the Atlantic slave trade, struggling, one after another, to justify atrocity. --Jill Lepore, author of *These Truths: A History of the United States* The first translation and publication of sixteen submissions to the notorious eighteenth-century Bordeaux essay contest on the cause of black skin--an indispensable chronicle of the rise of scientifically based, anti-Black racism. In 1739 Bordeaux's Royal Academy of Sciences announced a contest for the best essay on the sources of blackness. What is the physical cause of blackness and African hair, and what is the cause of Black degeneration, the contest announcement asked. Sixteen essays, written in French and Latin, were ultimately dispatched from all over Europe. The authors ranged from naturalists to physicians, theologians to amateur savants. Documented on each page are European ideas about who is Black and why. Looming behind these essays is the fact that some four million Africans had been kidnapped and shipped across the Atlantic by the time the contest was announced. The essays themselves represent a broad range of opinions. Some affirm that Africans had fallen from God's grace; others that blackness had resulted from a brutal climate; still others emphasized the anatomical specificity of Africans. All the submissions nonetheless circulate around a common theme: the search for a scientific understanding of the new concept of race. More

important, they provide an indispensable record of the Enlightenment-era thinking that normalized the sale and enslavement of Black human beings. These never previously published documents survived the centuries tucked away in Bordeaux's municipal library. Translated into English and accompanied by a detailed introduction and headnotes written by Henry Louis Gates, Jr., and Andrew Curran, each essay included in this volume lays bare the origins of anti-Black racism and colorism in the West.
