applied arts and science: *Cuttin' Up* Court Carney, 2009 Reveals how the new technologies of mass culture--the phonograph, radio, and film--played a key role in accelerating the diffusion of jazz as a modernist art form across the nation's racial divide. Focuses on four cities--New Orleans, New York, Chicago, and Los Angeles--to show how each city produced a distinctive style of jazz.

applied arts and science: The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education National Academies of Sciences, Engineering, and Medicine, Policy and Global Affairs, Board on Higher Education and Workforce, Committee on Integrating Higher Education in the Arts, Humanities, Sciences, Engineering, and Medicine, 2018-06-21 In the United States, broad study in an array of different disciplines—arts, humanities, science, mathematics, engineering—as well as an in-depth study within a special area of interest, have been defining characteristics of a higher education. But over time, in-depth study in a major discipline has come to dominate the curricula at many institutions. This evolution of the curriculum has been driven, in part, by increasing specialization in the academic disciplines. There is little doubt that disciplinary specialization has helped produce many of the achievement of the past century. Researchers in all academic disciplines have been able to delve more deeply into their areas of expertise, grappling with ever more specialized and fundamental problems. Yet today, many leaders, scholars, parents, and students are asking whether higher education has moved too far from its integrative tradition towards an approach heavily rooted in disciplinary silos. These silos represent what many see as an artificial separation of academic disciplines. This study reflects a growing concern that the approach to higher education that favors disciplinary specialization is poorly calibrated to the challenges and opportunities of our time. The Integration of the Humanities and Arts with Sciences, Engineering, and Medicine in Higher Education examines the evidence behind the assertion that educational programs that mutually integrate learning experiences in the humanities and arts with science, technology, engineering, mathematics, and medicine (STEMM) lead to improved educational and career outcomes for undergraduate and graduate students. It explores evidence regarding the value of integrating more STEMM curricula and labs into the academic programs of students majoring in the humanities and arts and evidence regarding the value of integrating curricula and experiences in the arts and humanities into college and university STEMM education programs.

applied arts and science: Art, Science, and the Politics of Knowledge Hannah Star Rogers, 2022-05-17 How the tools of STS can be used to understand art and science and the practices of these knowledge-making communities. In *Art, Science, and the Politics of Knowledge*, Hannah Star Rogers suggests that art and science are not as different from each other as we might assume. She shows how the tools of science and technology studies (STS) can be applied to artistic practice, offering new ways of thinking about people and objects that have largely fallen outside the scope of STS research. Arguing that the categories of art and science are labels with specific powers to order social worlds—and that art and science are best understood as networks that produce knowledge—Rogers shows, through a series of cases, the similarities and overlapping practices of these knowledge communities. The cases, which range from nineteenth-century artisans to contemporary bioartists, illustrate how art can provide the basis for a new subdiscipline called art, science, and technology studies (ASTS), offering hybrid tools for investigating art-science collaborations. Rogers's subjects include the work of father and son glassblowers, the Blaschkas, whose glass models, produced in the nineteenth century for use in biological classification, are now displayed as works of art; the physics photographs of documentary photographer Berenice Abbott; and a bioart lab that produces work functioning as both artwork and scientific output. Finally, Rogers, an STS scholar and contemporary art-science curator, draws on her own work to consider

the concept of curation as a form of critical analysis.

applied arts and science: Reductionism in Art and Brain Science Eric R. Kandel, 2016-08-30 Are art and science separated by an unbridgeable divide? Can they find common ground? In this new book, neuroscientist Eric R. Kandel, whose remarkable scientific career and deep interest in art give him a unique perspective, demonstrates how science can inform the way we experience a work of art and seek to understand its meaning. Kandel illustrates how reductionism—the distillation of larger scientific or aesthetic concepts into smaller, more tractable components—has been used by scientists and artists alike to pursue their respective truths. He draws on his Nobel Prize-winning work revealing the neurobiological underpinnings of learning and memory in sea slugs to shed light on the complex workings of the mental processes of higher animals. In *Reductionism in Art and Brain Science*, Kandel shows how this radically reductionist approach, applied to the most complex puzzle of our time—the brain—has been employed by modern artists who distill their subjective world into color, form, and light. Kandel demonstrates through bottom-up sensory and top-down cognitive functions how science can explore the complexities of human perception and help us to perceive, appreciate, and understand great works of art. At the heart of the book is an elegant elucidation of the contribution of reductionism to the evolution of modern art and its role in a monumental shift in artistic perspective. Reductionism steered the transition from figurative art to the first explorations of abstract art reflected in the works of Turner, Monet, Kandinsky, Schoenberg, and Mondrian. Kandel explains how, in the postwar era, Pollock, de Kooning, Rothko, Louis, Turrell, and Flavin used a reductionist approach to arrive at their abstract expressionism and how Katz, Warhol, Close, and Sandback built upon the advances of the New York School to reimagine figurative and minimal art. Featuring captivating drawings of the brain alongside full-color reproductions of modern art masterpieces, this book draws out the common concerns of science and art and how they illuminate each other.

applied arts and science: A Novel Approach to China Gengsong Gao, 2021 Gengsong Gao is Assistant Professor of Chinese Studies at the University of Richmond, where he teaches Chinese language courses and courses concerning modern and contemporary Chinese literature and culture. This book explores Chinese novelists' distinctive contributions to the China debate in terms of the key issues of Chinese language, power dynamics and Confucian tradition. As China is rising, Chinese scholars and policymakers are debating heatedly over China's past, present and future. Who are the major debaters? How do they analyze China's problems and figure out solutions? What are the main achievements and weaknesses of the Chinese intellectual debate and discourse? Chinese novelists also get involved in the China debate. However, their voices are rarely heard. This book argues that, by dramatizing the diversities of ordinary social actors' everyday languages, active discursive practices and enchanted local traditions, Chinese novelists do not merely illustrate the dominant liberal, the New Left and the New Confucian ideologies, but enrich the China debate and provide a novel approach to our understanding of modern China. Gengsong Gao's *A Novel Approach to China* is a highly original, multidimensional contribution to literary studies and Chinese thought, the kind of work that deserves widespread attention. First, he outlines and criticizes theoretical trends in postsocialist Chinese literary studies to show how these theories have blocked out the capacity of Chinese literary texts to articulate political and social issues in ways that the language of political argument has not. Second, he lays out the major positions of the political debates in post-Tiananmen China—liberals, New Confucians, New Left, Maoists, etc. Then he introduces the problematic of the social imaginary, the common background shared by all of a society's discourses, to connect the analysis of literature to the language politics. Gao's discussion of three contemporary novels by Han Shaogong, Wang Xiaobo, and Chen Zhongshi shows how these texts employ linguistic strategies that break down the ideological grids of the debate, not in order to deconstruct them, but to provide the resources for their enrichment. Readers of this book will not only get a thorough treatment of the relationship of Chinese literary theory to the West but an innovative theoretical problematic that

opens a new way for literature to contribute to public debates. -Meili Steele, Distinguished Professor Emeritus, University of South Carolina at Columbia. .

applied arts and science: To Walk About in Freedom: The Long Emancipation of Priscilla Joyner Carole Emberton, 2022-03-08 The extraordinary life of Priscilla Joyner and her quest—along with other formerly enslaved people—to define freedom after the Civil War. Priscilla Joyner was born into the world of slavery in 1858 North Carolina and came of age at the dawn of emancipation. Raised by a white slaveholding woman, Joyner never knew the truth about her parentage. She grew up isolated and unsure of who she was and where she belonged—feelings that no emancipation proclamation could assuage. Her life story—candidly recounted in an oral history for the Federal Writers' Project—captures the intimate nature of freedom. Using Joyner's interview and the interviews of other formerly enslaved people, historian Carole Emberton uncovers the deeply personal, emotional journeys of freedom's charter generation—the people born into slavery who walked into a new world of freedom during the Civil War. From the seemingly mundane to the most vital, emancipation opened up a myriad of new possibilities: what to wear and where to live, what jobs to take and who to love. Although Joyner was educated at a Freedmen's Bureau school and married a man she loved, slavery cast a long shadow. Uncertainty about her parentage haunted her life, and as Jim Crow took hold throughout the South, segregation, disfranchisement, and racial violence threatened the loving home she made for her family. But through it all, she found beauty in the world and added to it where she could. Weaving together illuminating voices from the charter generation, *To Walk About in Freedom* gives us a kaleidoscopic look at the lived experiences of emancipation and challenges us to think anew about the consequences of failing to reckon with the afterlife of slavery.

applied arts and science: You Can Do Anything George Anders, 2017-08-08 In a tech-dominated world, the most needed degrees are the most surprising: the liberal arts. Did you take the right classes in college? Will your major help you get the right job offers? For more than a decade, the national spotlight has focused on science and engineering as the only reliable choice for finding a successful post-grad career. Our destinies have been reduced to a caricature: learn to write computer code or end up behind a counter, pouring coffee. Quietly, though, a different path to success has been taking shape. In *You Can Do Anything*, George Anders explains the remarkable power of a liberal arts education - and the ways it can open the door to thousands of cutting-edge jobs every week. The key insight: curiosity, creativity, and empathy aren't unruly traits that must be reined in. You can be yourself, as an English major, and thrive in sales. You can segue from anthropology into the booming new field of user research; from classics into management consulting, and from philosophy into high-stakes investing. At any stage of your career, you can bring a humanist's grace to our rapidly evolving high-tech future. And if you know how to attack the job market, your opportunities will be vast. In this book, you will learn why resume-writing is fading in importance and why telling your story is taking its place. You will learn how to create jobs that don't exist yet, and to translate your campus achievements into a new style of expression that will make employers' eyes light up. You will discover why people who start in eccentric first jobs - and then make their own luck - so often race ahead of peers whose post-college hunt focuses only on security and starting pay. You will be ready for anything.

applied arts and science: The Art and Science of Social Research Deborah Carr, Elizabeth Heger Boyle, Benjamin Cornwell, Shelley Correll, Robert Crosnoe, Jeremy Freese, Mary C Waters, 2017-09-29 Written by a team of internationally renowned sociologists with experience in both the field and the classroom, *The Art and Science of Social Research* offers authoritative and balanced coverage of the full range of methods used to study the social world. The authors highlight the challenges of investigating the unpredictable topic of human lives while providing insights into what really happens in the field, the laboratory, and the survey call center.

applied arts and science: The Mindful Hand Lissa Roberts, Simon Schaffer, Peter Dear, 2007 Although manual labour and theoretical invention might now seem separate ventures, history teaches us that they are closely linked processes. *The Mindful Hand* explores innovative areas of

European society between the late Renaissance and the period of early industrialisation where the enterprise of knowledge and production relied on the most intimate connexions of thought and toil. This volume explains how philosophers and labourers collaborated in an environment where artisans and instrument-makers, administrators and entrepreneurs simultaneously pioneered technical change alongside knowledge formation. The essays gathered here help show how these projects were pursued together, yet why, in retrospect, the very categories of science and technology emerged as seemingly distinct endeavors.

applied arts and science: Drawing as a Way of Knowing in Art and Science Gemma Anderson-Tempini, 2017-10-01 In recent history, the arts and sciences have often been considered opposing fields of study, but a growing trend in drawing research is beginning to bridge this divide. Gemma Anderson's *Drawing as a Way of Knowing in Art and Science* introduces tested ways in which drawing as a research practice can enhance morphological insight, specifically within the natural sciences, mathematics and art. Inspired and informed by collaboration with contemporary scientists and Goethe's studies of morphology, as well as the work of artist Paul Klee, this book presents drawing as a means of developing and disseminating knowledge, and of understanding and engaging with the diversity of natural and theoretical forms, such as animal, vegetable, mineral and four dimensional shapes. Anderson shows that drawing can offer a means of scientific discovery and can be integral to the creation of new knowledge in science as well as in the arts.

In just a few years, the volume of microplastic particles will exceed that of plankton in our oceans and turn them into a huge sea of plastic. This publication brings together numerous international art projects related to environmental activities, DIY biotechnology, and science, and draws attention to the irreversible destruction of our marine ecosystems – the current threat posed by the loss of marine animal biodiversity, for example, or the decline in oxygen production due to massive plankton loss. It also presents current scientific findings on sustainable alternatives to plastic.

applied arts and science: (Re)Defining the Goal Kevin J. Fleming, Ph.d., Ph D Kevin J Fleming, 2016-07-02 How is it possible that both university graduates and unfilled job openings are both at record-breaking highs? Our world has changed. New and emerging occupations in every industry now require a combination of academic knowledge and technical ability. With rising education costs, mounting student debt, fierce competition for jobs, and the oversaturation of some academic majors in the workforce, we need to once again guide students towards personality-aligned careers and not just into college. Extensively researched, *(Re)Defining the Goal* deconstructs the prevalent one-size-fits-all education agenda. The author provides a fresh perspective, replicable strategies, and outlines six proven steps to help students secure a competitive advantage in the new economy. Gain a new paradigm and the right resources to help students avoid the pitfalls of unemployment, or underemployment, after graduation.

applied arts and science: *Routledge Handbook of Art, Science, and Technology Studies* Hannah Star Rogers, Megan K Halpern, Dehlia Hannah, Kathryn de Ridder-Vignone, 2021-12-22 Art and science work is experiencing a dramatic rise coincident with burgeoning Science and Technology Studies (STS) interest in this area. Science has played the role of muse for the arts, inspiring imaginative reconfigurations of scientific themes and exploring their cultural resonance. Conversely, the arts are often deployed in the service of science communication, illustration, and popularization. STS scholars have sought to resist the instrumentalization of the arts by the sciences, emphasizing studies of theories and practices across disciplines and the distinctive and complementary contributions of each. The manifestation of this commonality of creative and epistemic practices is the emergence of Art, Science, and Technology Studies (ASTS) as the interdisciplinary exploration of art-science. This handbook defines the modes, practices, crucial literature, and research interests of this emerging field. It explores the questions, methodologies, and theoretical implications of scholarship and practice that arise at the intersection of art and STS. Further, ASTS demonstrates how the arts are intervening in STS. Drawing on methods and concepts derived from STS and allied fields including visual studies, performance studies, design studies, science communication, and aesthetics and the knowledge of practicing artists and curators, ASTS is predicated on the capacity to see both art and science as constructions of human knowledge-making. Accordingly, it posits a new analytical vernacular, enabling new ways of seeing, understanding, and thinking critically about the world. This handbook provides scholars and practitioners already familiar with the themes and tensions of art-science with a means of connecting across disciplines. It proposes organizing principles for thinking about art-science across the sciences, social sciences, humanities, and arts. Encounters with art and science become meaningful in relation to practices and materials manifest as perceptual habits, background knowledge, and cultural norms. As the chapters in this handbook demonstrate, a variety of STS tools can be brought to bear on art-science so that systematic research can be conducted on this unique set of knowledge-making practices.

applied arts and science: *Design and Science in Modern China* Lisa Claypool, 2024-10-28 What is design in modern China? And what are the ecological stakes in understanding how modern Chinese design encourages us to see? This book takes up these questions through exploration into the work of three famous designers who were actively engaged with the natural sciences in early twentieth-century Shanghai, Canton, and Beijing. The designed objects asking for heightened vision into interior and exterior worlds make their way across temporal and cultural boundaries. This book, then, is also about that movement, and the emotions of the eye which support it. Porcelain dishes,

textiles, magazine covers, and paintings moved the people who lived with them a century ago in China to an awareness of their edges, rims, borders as boundary lines, and to see things through those in-between forms from a new point of view; to share pleasure in colour and pattern, perhaps, but also to connect to other deeply transformative feelings at the boundary. The book will be of interest to scholars working in design history, art history, and Chinese studies.
